BIG IDEAS MATH®
Modeling Real Life

Grade 5
Common Core Edition

Volume 1

Ron Larson
Laurie Boswell

Big Ideas Learning™

Big Ideas Learning

One Voice from Kindergarten Through Algebra 2

Written by renowned authors, Dr. Ron Larson and Dr. Laurie Boswell, *Big Ideas Math* offers a seamless math pedagogy from elementary through high school. Together, Ron and Laurie provide a consistent voice that encourages students to make connections through cohesive progressions and clear instruction. Since 1992, Ron and Laurie have authored over 50 mathematics programs.

> *Each time Laurie and I start working on a new program, we spend time putting ourselves in the position of the reader. How old is the reader? What is the reader's experience with mathematics? The answers to these questions become our writing guides. Our goal is to make the learning targets understandable and to develop these targets in a clear path that leads to student success.*

Ron Larson

Ron Larson, Ph.D., is well known as lead author of a comprehensive and widely used mathematics program that ranges from elementary school through college. He holds the distinction of Professor Emeritus from Penn State Erie, The Behrend College, where he taught for nearly 40 years. He received his Ph.D. in mathematics from the University of Colorado. Dr. Larson engages in the latest research and advancements in mathematics education and consistently incorporates key pedagogical elements to ensure focus, coherence, rigor, and student self-reflection.

> *My passion and goal in writing is to provide an essential resource for exploring and making sense of mathematics. Our program is guided by research around the learning and teaching of mathematics in the hopes of improving the achievement of all students. May this be a successful year for you!*

Laurie Boswell

Laurie Boswell, Ed.D., is the former Head of School at Riverside School in Lyndonville, Vermont. In addition to authoring textbooks, she provides mathematics consulting and embedded coaching sessions. Dr. Boswell received her Ed.D. from the University of Vermont in 2010. She is a recipient of the Presidential Award for Excellence in Mathematics Teaching and later served as president of CPAM. Laurie has taught math to students at all levels, elementary through college. In addition, Laurie has served on the NCTM Board of Directors and as a Regional Director for NCSM. Along with Ron, Laurie has co-authored numerous math programs and has become a popular national speaker.

Contributors, Reviewers, and Research

Big Ideas Learning would like to express our gratitude to the mathematics education and instruction experts who served as our advisory panel, contributing specialists, and reviewers during the writing of *Big Ideas Math: Modeling Real Life*. Their input was an invaluable asset during the development of this program.

Contributing Specialists and Reviewers

- **Sophie Murphy**, Ph.D. Candidate, Melbourne School of Education, Melbourne, Australia
  Learning Targets and Success Criteria Specialist and Visible Learning Reviewer

- **Linda Hall**, Mathematics Educational Consultant, Edmond, OK
  Advisory Panel

- **Michael McDowell**, Ed.D., Superintendent, Ross, CA
  Project-Based Learning Specialist

- **Kelly Byrne**, Math Supervisor and Coordinator of Data Analysis, Downingtown, PA
  Advisory Panel

- **Jean Carwin**, Math Specialist/TOSA, Snohomish, WA
  Advisory Panel

- **Nancy Siddens**, Independent Language Teaching Consultant, Las Cruces, NM
  English Language Learner Specialist

- **Kristen Karbon**, Curriculum and Assessment Coordinator, Troy, MI
  Advisory Panel

- **Kery Obradovich**, K–8 Math/Science Coordinator, Northbrook, IL
  Advisory Panel

- **Jennifer Rollins**, Math Curriculum Content Specialist, Golden, CO
  Advisory Panel

- **Becky Walker**, Ph.D., School Improvement Services Director, Green Bay, WI
  Advisory Panel and Content Reviewer

- **Deborah Donovan**, Mathematics Consultant, Lexington, SC
  Content Reviewer

- **Tom Muchlinski**, Ph.D., Mathematics Consultant, Plymouth, MN
  Content Reviewer and Teaching Edition Contributor

- **Mary Goetz**, Elementary School Teacher, Troy, MI
  Content Reviewer

- **Nanci N. Smith**, Ph.D., International Curriculum and Instruction Consultant, Peoria, AZ
  Teaching Edition Contributor

- **Robyn Seifert-Decker**, Mathematics Consultant, Grand Haven, MI
  Teaching Edition Contributor

- **Bonnie Spence**, Mathematics Education Specialist, Missoula, MT
  Teaching Edition Contributor

- **Suzy Gagnon**, Adjunct Instructor, University of New Hampshire, Portsmouth, NH
  Teaching Edition Contributor

- **Art Johnson**, Ed.D., Professor of Mathematics Education, Warwick, RI
  Teaching Edition Contributor

- **Anthony Smith**, Ph.D., Associate Professor, Associate Dean, University of Washington Bothell, Seattle, WA
  Reading and Writing Reviewer

- **Brianna Raygor**, Music Teacher, Fridley, MN
  Music Reviewer

- **Nicole Dimich Vagle**, Educator, Author, and Consultant, Hopkins, MN
  Assessment Reviewer

- **Janet Graham**, District Math Specialist, Manassas, VA
  Response to Intervention and Differentiated Instruction Reviewer

- **Sharon Huber**, Director of Elementary Mathematics, Chesapeake, VA

Research

Ron Larson and Laurie Boswell used the latest in educational research, along with the body of knowledge collected from expert mathematics instructors, to develop the *Modeling Real Life* series. The pedagogical approach used in this program follows the best practices outlined in the most prominent and widely accepted educational research, including:

- *Visible Learning*, John Hattie © 2009
- *Visible Learning for Teachers*
  John Hattie © 2012
- *Visible Learning for Mathematics*
  John Hattie © 2017
- *Principles to Actions: Ensuring Mathematical Success for All*
  NCTM © 2014
- *Adding It Up: Helping Children Learn Mathematics*
  National Research Council © 2001
- *Mathematical Mindsets: Unleashing Students' Potential through Creative Math, Inspiring Messages and Innovative Teaching*
  Jo Boaler © 2015
- *What Works in Schools: Translating Research into Action*

Instructional Design

A single authorship team from Kindergarten through Algebra 2 results in a logical progression of focused topics with meaningful coherence from course to course.

FOCUS

A focused program dedicates lessons, activities, and assessments to grade-level standards while simultaneously supporting and engaging you in the major work of the course.

The **Learning Target** and **Success Criteria** for each lesson focus the learning into manageable chunks, using clear teaching text and Key Ideas.

Learning Target: Compare fractions that have the same denominator.
Success Criteria:
- I can model fractions that have the same denominator.
- I can use the numerators to compare fractions.
- I can explain how to compare fractions that have the same denominator.

### Laurie's Notes

Preparing to Teach

In the previous lesson, students learned how to use an Inch Ruler to measure lengths to the nearest inch. In this lesson, they add *foot* and *yard* to their length measurement units. Students will measure objects to the nearest foot and nearest yard. They will also choose among an inch ruler, yardstick, and measuring tape as the instrument for measuring a specific object.

Laurie's Notes, located in the Teaching Edition, prepare your teacher for the math concepts in each chapter and lesson and make connections to the threads of major topics for the course.

Think and Grow: Find Factor Pairs

You can write whole numbers as products of two factors. The two factors are called a **factor pair** for the number.

factor pair
$$2 \times 4 = 8$$
factor   factor

2 and 4 are a factor pair for 8.

Example   Find the factor pairs for 20.

Find the side lengths of as many different rectangles with an area of 20 square units as possible.

A 4 × 5 rectangle has the same area as a 5 × 4 rectangle. Both give the factor pair 4 and 5.
The side lengths of each rectangle are a factor pair.

So, the factor pairs for 20 are _____ and _____, _____ and _____, and _____ and _____.

a Single Authorship Team

COHERENCE

A single authorship team built a coherent program that has intentional progression of content within each grade and between grade levels. You will build new understanding on foundations from prior grades and connect concepts throughout the course.

The authors developed content that progresses from prior chapters and grades to future ones. In addition to charts like this one, Laurie's Notes give your teacher insights about where you have come from and where you are going in your learning progression.

| Through the Grades		
Grade 4	**Grade 5**	**Grade 6**
• Create a number or shape pattern that follows a given rule. • Describe attributes of a pattern that are not part of the rule.	• Describe a coordinate system using appropriate vocabulary. • Graph points in a coordinate plane to represent real-world problems. • Explain the value of points in a coordinate plane in relation to a real-world problem. • Analyze patterns based on relationships and operations. • Create numeric patterns using given rules. • Graph ordered pairs in a coordinate plane.	• Graph ordered pairs in all four quadrants of the coordinate plane. • Draw polygons in the coordinate plane. • Graph ordered pairs in all four quadrants of the coordinate plane. • Understand ratios and describe ratio relationships.

One author team thoughtfully wrote each course, creating a seamless progression of content from Kindergarten to Algebra 2.

	Grade K	Grade 1	Grade 2	Grade 3	Grade 4	Grade 5	Grade 6	
	Operations and Algebraic Thinking				Operations and Algebraic Thinking		Expressions and Equations	
Algebra and Functions	Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from. *Chapters 5–7*	Solve problems involving addition and subtraction within 20. Apply properties of operations. Work with addition and subtraction equations. *Chapters 1–5, 10, 11*	Solve problems involving addition and subtraction within 20. Work with equal groups of objects. *Chapters 1–6, 15*	Solve problems involving multiplication and division within 100. Apply properties of multiplication. Solve problems involving the four operations, and identify and explain patterns in arithmetic. *Chapters 1–5, 8, 9, and 14*	Use the four operations with whole numbers to solve problems. Understand factors and multiples. Generate and analyze patterns. *Chapters 2–6, 12*	Write and interpret numerical expressions. Analyze patterns and relationships. *Chapters 2, 12*	Perform arithmetic with algebraic expressions. *Chapter 5* Solve one-variable equations and inequalities. *Chapters 6, 8* Analyze relationships between dependent and independent variables. *Chapter 6*	Write Chap Use n expre inequ Chap

Think and Grow: Divide by 3 or 4

Example Find 18 ÷ 3.

Think: 3 times what number is 18?
3 × ___ = 18

_____ columns

3 rows
18 ÷ 3 = _____ or 3)18

Throughout each course, lessons build on prior learning as new concepts are introduced. Here you are reminded of a multiplication fact, that you already know, to help solve the division problem.

Rigor in Math: A Balanced Approach

Instructional Design

The authors wrote each chapter and every lesson to provide a meaningful balance of rigorous instruction.

RIGOR

A rigorous program provides a balance of three important building blocks.

- **Conceptual Understanding**
  Discovering why
- **Procedural Fluency**
  Learning how
- **Application**
  Knowing when to apply

Conceptual Understanding

You have the opportunity to develop foundational concepts central to the *Learning Target* in each *Explore and Grow* by experimenting with new concepts, talking with peers, and asking questions.

Explore and Grow

Let's explore counting to 1,000 in different ways.

Count by hundreds to 1,000.

× Clear   ↶ Undo   ↷ Redo

300 ___ 400 500 600 700 800 900 ___ 1,000   Show Me

ENGLISH   ▶ Next ➡

Conceptual Thinking

Conceptual questions ask you to think deeply.

14. **MP Number Sense** A sum has 5 addends. Each addend is a unit fraction. The sum is 1. What are the addends?

Think and Grow

When I **compare** 16 and 13, I see that 16 has more ones.

14 has fewer ones than 17.

16 ___ is **greater than** 13 / is less than .

14 ___ is greater than / is **less than** 17 .

Procedural Fluency

Solidify learning with clear, stepped-out teaching in *Key Ideas* and *Think and Grow* examples.

Then shift conceptual understanding into procedural fluency with *Show and Grow*, *Apply and Grow*, *Homework & Practice*, and *Review & Refresh*.

1 Place Value Concepts

- What kinds of numbers would you find on a map?
- Why is place value important when you read a map?

Chapter Learning Target:
Understand place value.
Chapter Success Criteria:
■ I can define the value of a number.
■ I can explain how to use symbols to compare two numbers.
■ I can compare the value of two identical digits in a number.
■ I can read and write multi-digit numbers in multiple forms.

Name _____

Performance Task 1

You hike from Point A through Point F along the orange path shown on the map.

1. What is the distance in elevation between each contour line?

_____

2. As you walk from A to C, are you walking uphill or downhill? Explain.

Contour Lines

2,500 ft
3,000 ft
2,000 ft
Start here

5. **Modeling Real Life** You download 2 music videos, a TV series, and a movie for $42.95 total. The TV series costs 2 times as much as the movie. How much does each music video cost?

Lost Treasure
Order Confirmation
Total **$12.99**
WATCH NOW ▶

6. **DIG DEEPER!** Which item costs more per ounce? How much more?

$23.04
Glue 1 gal

$4.00
Paste 2 cups

THE PROBLEM-SOLVING PLAN

1. **Understand the Problem**
   Think about what the problem is asking, what information you know, and how you might begin to solve.

2. **Make a Plan**
   Plan your solution pathway before jumping in to solve. Identify any relationships and decide on a problem-solving strategy.

3. **Solve and Check**
   As you solve the problem, be sure to evaluate your progress and check your answers. Throughout the problem-solving process, you must continually ask, "Does this make sense?" and be willing to change course if necessary.

Embedded Mathematical Practices

Encouraging Mathematical Mindsets

Developing proficiency in the **Mathematical Practices** is about becoming a mathematical thinker. Learn to ask why, and to reason and communicate with others as you learn. Use this guide to develop proficiency with the mathematical practices.

Example   A pet store receives a shipment of 8 boxes of dog treats. Each box is 2 feet high and has 18 bags of dog treats. How many ounces of dog treats does the pet store receive in the shipment?

Understand the Problem

What do you know?
- The store receives 8 boxes.
- Each box is 2 feet high.
- Each box has 18 bags of dog treats.
- Each bag weighs 32 ounces.

What do you need to find?
- You need to find how many ounces of dog treats the pet store receives in the shipment.

Make a Plan

How will you solve?
- Multiply 32 by 18 to find how many ounces of dog treats are in each box.
- Then multiply the product by 8 to find how many ounces of dog treats the pet store receives in the shipment.
- The height of each box is unnecessary information.

Solve

Step 1: How many ounces of dog treats are in each box?

$$32 \times 18 = b$$

b is the unknown product.

$$\begin{array}{r} 3\ 2 \\ \times\ 1\ 8 \\ \hline \end{array}$$

$$b = \underline{\qquad}$$

Step 2: Use b to find how many ounces of dog treats the pet store receives.

$$b \times 8 = p$$

p is the unknown product.

$$\begin{array}{r} \\ \times\qquad 8 \\ \hline \end{array}$$

$$p = \underline{\qquad}$$

1

One way to **Make Sense of Problems and Persevere in Solving Them** is to use the Problem-Solving Plan. Take time to analyze the given information and what the problem is asking to help you plan a solution pathway.

Look for labels such as:
- Find Entry Points
- Analyze a Problem
- Interpret a Solution
- Make a Plan
- Use a Similar Problem
- Check Your Work

2

Reason Abstractly when you explore an example using numbers and models to represent the problem. Other times, **Reason Quantitatively** when you see relationships in numbers or models and draw conclusions about the problem.

Look for labels such as:
- Reasoning
- Number Sense
- Use Equations
- Use Expressions

Example   You pick $2\frac{3}{4}$ pounds of cherries. Your friend picks $1\frac{2}{4}$ pounds of cherries. How many pounds of cherries do you and your friend pick in all?

MP Reasoning
How do you know your answer is greater than 3 pounds without solving?
3

When you **Construct Viable Arguments and Critique the Reasoning of Others**, you make and justify conclusions and decide whether others' arguments are correct or flawed.

Look for labels such as:
- Construct an Argument
- You Be the Teacher
- Logic
- Make a Conjecture
- Justify a Result
- Compare Arguments

Find an equivalent fraction.

14. $\frac{3}{12}$

MP Construct an Argument Why should you use a common factor other than 1 when finding an equivalent fraction?

17. **MP Logic** Is ★ greater than or less than ▼? Explain.

4

To **Model with Mathematics**, apply the math you learned to a real-life problem and interpret mathematical results in the context of the situation.

Look for labels such as:
- Modeling Real Life
- Graph Data
- Analyze a Relationship
- Does It Make Sense?

Modeling Real Life Use the amusement park map to answer the question.

Rides

Picinic Tables

Kiddie Land

Food Court

9. What is the area of the food court section?

10. **DIG DEEPER!** Which area is greater, the kiddie land section or the picnic tables section? Explain.

BUILDING TO FULL UNDERSTANDING

Throughout each course, you have opportunities to demonstrate specific aspects of the mathematical practices. Labels throughout the book indicate gateways to those aspects. Collectively, these opportunities will lead to a full understanding of each mathematical practice. Developing these mindsets and habits will give meaning to the mathematics you learn.

5

To **Use Appropriate Tools Strategically**, you need to know what tools are available and think about how each tool might help you solve a mathematical problem. When you choose a tool to use, remember that it may have limitations.

Look for labels such as:
- Choose Tools
- Use Math Tools
- Use Technology

10. **MP Choose Tools** Choose the best tool to measure each item.

A   B   C   D

The liquid volume of a bowl: _____

The length of a spoon: _____

The mass of an orange: _____

The number of minutes you jog: _____

Explore and Grow

Work with a partner. Use an appropriate tool to mark 3 lengths on the floor or in a hallway that are 1 yard, 2 yards, and 3 yards long. Then measure the lengths in feet and in inches.

Think: How do the lengths, in inches, compare to the lengths in feet? How does each length compare to 1 yard?

MP Choose Tools
How did you decide which tool to use to draw the 2-yard and 3-yard lengths?

1 foot is _____ times as long as 1 inch.

1 yard is _____ times as long as 1 foot.

1 yard is _____ times as long as 1 inch.

6

When you **Attend to Precision**, you are developing a habit of being careful in how you talk about concepts, label work, and write answers.

Look for labels such as:
- Precision
- Communicate Clearly
- Maintain Accuracy

13. **MP Precision** How many decimal places are in the unknown factor? Explain.

$$\_\_\_\_\_ \times 2.8 = 4.48$$

Another Way: Use the *make a ten* strategy. Start at 245. Count on to the nearest ten. Then count on by tens and by ones.
MP Maintain Accuracy
After you add 3, how do you keep track of how much more you need to add?

+5   +30   +3

245

$$245 + 38 = \_\_\_\_\_$$

8. **Structure** Write an equation represented by the quick sketch.

Ones	Tenths	Hundredths
Example

	Thousands Period			Ones Period		
Hundreds	Tens	Ones	Hundreds	Tens	Ones
2	7	5,	4	4	9

- The number, in standard form, is _____ .
- The value of the digit 7 is 7 ten thousands, or _____ .
- The value of the digit 4 in the hundreds place is _____ .
- The value of the digit 4 in the tens place is _____ .
- The value of the digit 4 in the hundreds place is _____ times the value of the digit 4 in the tens place.

MP Patterns
What pattern do you notice in the two periods?

7

Look For and Make Use of Structure by looking closely to see structure within a mathematical statement, or stepping back for an overview to see how individual parts make one single object.

Look for labels such as:
- Structure
- Patterns

MP Repeated Reasoning Explain to your partner how you can use expanded form to find 364 × 8.

Example Create a shape pattern by repeating the rule "triangle, hexagon, square, rhombus." What is the 42nd shape in the pattern?

Create the pattern.

42 ÷ 4 is 10 R2, so when the pattern repeats 10 times,

the 40th shape is a _____ . So, the 41st shape is a

_____ and the 42nd shape is a _____ .

Example Describe the dot
_____ re

MP Find a Rule
Why do you divide by 4?

Figure 1   Figure 2   Figure 3

_ dots, so it has 1 × _____ = _____ dots.

8

When you **Look For and Express Regularity in Repeated Reasoning**, you can notice patterns and make generalizations. Remember to keep in mind the goal of a problem, which will help you evaluate reasonableness of answers along the way.

Look for labels such as:
- Repeated Reasoning
- Find a Rule

Making Learning Visible

Knowing the learning intention of a chapter or lesson helps you focus on the purpose of an activity, rather than simply completing it in isolation. This program supports visible learning through the consistent use of Learning Targets and Success Criteria to help you become successful.

Every chapter and lesson shows a **Learning Target** and related **Success Criteria**. These are purposefully integrated into each carefully written lesson.

Name _____

Measure Elapsed Time within the Hour 12.2

Learning Target: Measure elapsed time, in minutes, within the same hour.

Success Criteria:
- I can identify start and end times.
- I can find the amount of time that passes between two times.
- I can explain how to find elapsed time within the same hour.

Chapter Learning Target:
Understand data.

Chapter Success Criteria:
- ■ Identify a tool to collect data.
- ■ Create a tally chart to make a graph.
- ■ Represent data in different ways.
- ■ Interpret data in different ways.

There are four **Success Criteria** in each chapter.
- ■ indicates surface level
- ■ indicates deeper level which leads to the transfer of learning

Access the **Learning Target** and **Success Criteria** on every page of the Dynamic Student Edition.

Grade 3: MRL   testteacher@test.com

LEARNING TARGET   MATH TOOLS   MY NOTES   LAURIE'S NOTES

Think and Grow: Measure Elapsed Time

Elapsed time is the amount of time that passes from a starting time to an ending time.

Example

Find the elapsed time between 2:05 P.M. and 2:43 P.M.

One Way: Use an analog clock.

Step 1: Draw the starting time.

Step 2: Mark the ending time.

Step 3: Count the minutes by 5s and 1s until you reach the ending time. So, the elapsed time is 38

Another Way: Use a number line.

Step 1: Plot the starting time on a number line.

Step 2: Count on until you reach the ending time.

+10 min +10 min +10 min +5 min +3 min = ____ minutes

2:05   2:15   2:25   2:35   2:40 2:43

Click-Through Example

Learning Target

Measure elapsed time, in minutes, within the same hour.

Success Criteria
- I can identify start and end times.
- I can find the amount of time that passes between two times.
- I can explain how to find elapsed time within the same hour.

QUESTIONS FOR LEARNING

As you progress through a lesson, you should be able to answer the following questions.

- What am I learning?
- Why am I learning this?
- Where am I in my learning?
- How will I know when I have learned it?
- Where am I going next?

Success Criteria, and Self-Assessment

1	2	3	4
I do not understand.	I can do it with help.	I can do it on my own.	I can teach someone else.

Use a 4-point scale to rate your understanding of each success criterion. Keep track of your learning on paper or online.

3.8 Multiply Three Factors

	1	2	3	4
Learning Target: Use the Associative property of Multiplication.	1	2	3	4
I can explain the Associative Property of Multiplication.	1	2	3	4
I can change the grouping of factors.	1	2	3	4
I can multiply three factors to find a product.	1	2	3	4

Self-Assessment

| 1 | I do not understand. | 2 | I can do it with help. | 3 | I can do it on my own. | 4 | I can teach someone else. |

- Chapter 5 Divide Multi-Digit Numbers by One-Digit Numbers
- 5.1 Divide Tens, Hundreds, and Thousands
- 5.2 Estimate Quotients
- 5.3 Understand Division and Remainders
- 5.4 Use Partial Quotients

Learning Target	1	2	3	4
Use partial quotients to divide.	○	○	◉	○

Success Criteria	1	2	3	4
I can explain how to use an area model to divide.	○	○	○	◉
I can write partial quotients for a division problem.	○	◉	○	○
I can add thepartial quotients to find a quotient.	○	○	◉	○

Self-Assessments are included throughout every lesson, and in the **Chapter Review**, to help you take ownership of your learning and think about where to go next.

Ensuring Positive Outcomes

John Hattie's *Visible Learning* research consistently shows that using Learning Targets and Success Criteria can result in two years' growth in one year, ensuring positive outcomes for your learning and achievement.

Sophie Murphy, M.Ed., wrote the chapter-level Learning Targets and Success Criteria for this program. Sophie is currently completing her Ph.D. at the University of Melbourne in Australia with Professor John Hattie as her leading supervisor. Sophie completed her Master's thesis with Professor John Hattie in 2015. Sophie has over 20 years of experience as a teacher and school leader in private and public school settings in Australia.

Strategic Support for Online Learning

Get the Support You Need, When You Need It

There will be times throughout this course when you may need help. Whether you missed a lesson, did not understand the content, or just want to review, take advantage of the resources provided in the *Dynamic Student Edition*.

Use the **Self-Assessment** tool to keep track of your understanding of the lesson's Learning Target and Success Criteria.

Take notes throughout the lesson using the **My Notes** function. These notes will be organized by chapter and lesson.
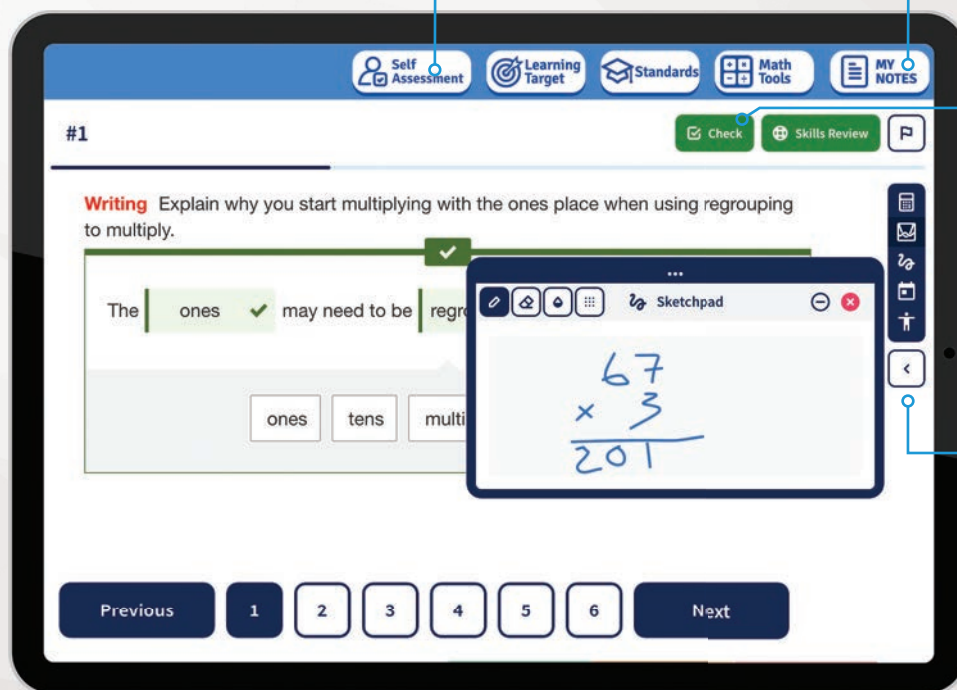

Check your answers to selected exercises as you work through the lesson. Use the **Help** option to view the Digital Example and Tutorial Extra Example videos.

Use the available **tools**, such as the calculator or sketchpad, to help clearly show your work and demonstrate your math knowledge. Tools are easy to use and were created with accessibility and functionality in mind.
