2.3 Postulates and Diagrams

Essential Question  In a diagram, what can be assumed and what needs to be labeled?

**Exploration 1** Looking at a Diagram

Work with a partner. On a piece of paper, draw two perpendicular lines. Label them \( \overline{AB} \) and \( \overline{CD} \). Look at the diagram from different angles. Do the lines appear perpendicular regardless of the angle at which you look at them? Describe all the angles at which you can look at the lines and have them appear perpendicular.

**Exploration 2** Interpreting a Diagram

Work with a partner. When you draw a diagram, you are communicating with others. It is important that you include sufficient information in the diagram. Use the diagram to determine which of the following statements you can assume to be true. Explain your reasoning.

a. All the points shown are coplanar.

b. Points \( D, G, \) and \( I \) are collinear.

c. Points \( A, C, \) and \( H \) are collinear.

d. \( \overline{EG} \) and \( \overline{AH} \) are perpendicular.

e. \( \angle BCA \) and \( \angle ACD \) are a linear pair.

f. \( \overline{AF} \) and \( \overline{BD} \) are perpendicular.

h. \( \overline{AF} \) and \( \overline{BD} \) are coplanar.

i. \( \overline{AF} \) and \( \overline{BD} \) intersect.

j. \( \angle ACD \) and \( \angle BCF \) are congruent.

g. \( \overline{EG} \) and \( \overline{BD} \) are parallel.

i. \( \overline{EG} \) and \( \overline{BD} \) do not intersect.

k. \( \overline{EG} \) and \( \overline{BD} \) are perpendicular.

l. \( \overline{AC} \) and \( \overline{FH} \) are the same line.

Communicate Your Answer

3. In a diagram, what can be assumed and what needs to be labeled?

4. Use the diagram in Exploration 2 to write two statements you can assume to be true and two statements you cannot assume to be true. Your statements should be different from those given in Exploration 2. Explain your reasoning.
### What You Will Learn

- Identify postulates using diagrams.
- Sketch and interpret diagrams.

## Identifying Postulates

Here are seven more postulates involving points, lines, and planes.

### Postulates

#### Point, Line, and Plane Postulates

<table>
<thead>
<tr>
<th>Postulate</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>2.1 Two Point Postulate</strong></td>
<td>Through any two points, there exists exactly one line.</td>
</tr>
<tr>
<td><strong>2.2 Line-Point Postulate</strong></td>
<td>A line contains at least two points.</td>
</tr>
<tr>
<td><strong>2.3 Line Intersection Postulate</strong></td>
<td>The intersection of line $m$ and line $n$ is point $C$.</td>
</tr>
<tr>
<td><strong>2.4 Three Point Postulate</strong></td>
<td>Through any three noncollinear points, there exists exactly one plane.</td>
</tr>
<tr>
<td><strong>2.5 Plane-Point Postulate</strong></td>
<td>A plane contains at least three noncollinear points.</td>
</tr>
<tr>
<td><strong>2.6 Plane-Line Postulate</strong></td>
<td>Points $D$ and $E$ lie in plane $R$, so $DE$ lies in plane $R$.</td>
</tr>
<tr>
<td><strong>2.7 Plane Intersection Postulate</strong></td>
<td>The intersection of plane $S$ and plane $T$ is line $ℓ$.</td>
</tr>
</tbody>
</table>
**EXAMPLE 1** Identifying a Postulate Using a Diagram

State the postulate illustrated by the diagram.

a. If then

b. If then

**SOLUTION**

a. **Line Intersection Postulate** If two lines intersect, then their intersection is exactly one point.

b. **Plane Intersection Postulate** If two planes intersect, then their intersection is a line.

**EXAMPLE 2** Identifying Postulates from a Diagram

Use the diagram to write examples of the Plane-Point Postulate and the Plane-Line Postulate.

**SOLUTION**

**Plane-Point Postulate** Plane $P$ contains at least three noncollinear points, $A$, $B$, and $C$.

**Plane-Line Postulate** Point $A$ and point $B$ lie in plane $P$. So, line $n$ containing points $A$ and $B$ also lies in plane $P$.

**Monitoring Progress** Help in English and Spanish at BigIdeasMath.com

1. Use the diagram in Example 2. Which postulate allows you to say that the intersection of plane $P$ and plane $Q$ is a line?

2. Use the diagram in Example 2 to write an example of the postulate.
   a. Two Point Postulate
   b. Line-Point Postulate
   c. Line Intersection Postulate
Sketching and Interpreting Diagrams

**Example 3**  Sketching a Diagram

Sketch a diagram showing $\overrightarrow{TV}$ intersecting $\overrightarrow{PQ}$ at point $W$, so that $\overrightarrow{TW} \cong \overrightarrow{WV}$.

**Solution**

Step 1  Draw $\overrightarrow{TV}$ and label points $T$ and $V$.

Step 2  Draw point $W$ at the midpoint of $\overrightarrow{TV}$. Mark the congruent segments.

Step 3  Draw $\overrightarrow{PQ}$ through $W$.

A line is a **line perpendicular to a plane** if and only if the line intersects the plane in a point and is perpendicular to every line in the plane that intersects it at that point.

In a diagram, a line perpendicular to a plane must be marked with a right angle symbol, as shown.

**Example 4**  Interpreting a Diagram

Which of the following statements cannot be assumed from the diagram?

Points $A$, $B$, and $F$ are collinear.

Points $E$, $B$, and $D$ are collinear.

$\overrightarrow{AB} \perp \text{plane } S$

$\overrightarrow{CD} \perp \text{plane } T$

$\overrightarrow{AF}$ intersects $\overrightarrow{BC}$ at point $B$.

**Solution**

No drawn line connects points $E$, $B$, and $D$. So, you cannot assume they are collinear. With no right angle marked, you cannot assume $\overrightarrow{CD} \perp \text{plane } T$.

**Monitoring Progress**

Refer back to Example 3.

3. If the given information states that $\overrightarrow{PW}$ and $\overrightarrow{QW}$ are congruent, how can you indicate that in the diagram?

4. Name a pair of supplementary angles in the diagram. Explain.

Use the diagram in Example 4.

5. Can you assume that plane $S$ intersects plane $T$ at $\overrightarrow{BC}$?

6. Explain how you know that $\overrightarrow{AB} \perp \overrightarrow{BC}$. 

---

86  Chapter 2  Reasoning and Proofs
1. **COMPLETE THE SENTENCE** Through any ________ noncollinear points, there exists exactly one plane.

2. **WRITING** Explain why you need at least three noncollinear points to determine a plane.

**Vocabulary and Core Concept Check**

In Exercises 3 and 4, state the postulate illustrated by the diagram. (See Example 1.)

3. If △ABC, then △ABD

4. If △ABC, then △BAC

In Exercises 5–8, use the diagram to write an example of the postulate. (See Example 2.)

5. Line-Point Postulate (Postulate 2.2)
6. Line Intersection Postulate (Postulate 2.3)
7. Three Point Postulate (Postulate 2.4)
8. Plane-Line Postulate (Postulate 2.6)

In Exercises 9–12, sketch a diagram of the description. (See Example 3.)

9. Plane P and line m intersecting plane P at a 90° angle
10. XY in plane P, XY bisected by point A, and point C not on XY
11. XY intersecting VW at point A, so that AX = VA
12. AB, CD, and EF are all in plane P, and point X is the midpoint of all three segments.

In Exercises 13–20, use the diagram to determine whether you can assume the statement. (See Example 4.)

13. Planes W and X intersect at KL.
14. Points K, L, M, and N are coplanar.
15. Points Q, J, and M are collinear.
16. MN and RP intersect.
17. JK lies in plane X.
18. ∠PLK is a right angle.
19. ∠NKL and ∠JKM are vertical angles.
20. ∠NKJ and ∠JLM are supplementary angles.

**ERROR ANALYSIS** In Exercises 21 and 22, describe and correct the error in the statement made about the diagram.

21. M is the midpoint of AC and BD.

22. AC intersects BD at a 90° angle, so AC ⊥ BD.

Section 2.3  Postulates and Diagrams  87
23. **ATTENDING TO PRECISION** Select all the statements about the diagram that you cannot conclude.

(A) $A, B,$ and $C$ are coplanar.
(B) Plane $T$ intersects plane $S$ in $BC$.
(C) $AB$ intersects $CD$.
(D) $HC \perp CD$.
(E) Plane $T \perp$ plane $S$.
(F) Point $B$ bisects $HC$.
(G) $\angle ABH$ and $\angle HBF$ are a linear pair.
(H) $AF \perp CD$.

24. **HOW DO YOU SEE IT?** Use the diagram of line $m$ and point $C$. Make a conjecture about how many planes can be drawn so that line $m$ and point $C$ lie in the same plane. Use postulates to justify your conjecture.

![Diagram with line m and point C]

25. **MATHEMATICAL CONNECTIONS** One way to graph a linear equation is to plot two points whose coordinates satisfy the equation and then connect them with a line. Which postulate guarantees this process works for any linear equation?

26. **MATHEMATICAL CONNECTIONS** A way to solve a system of two linear equations that intersect is to graph the lines and find the coordinates of their intersection. Which postulate guarantees this process works for any two linear equations?

In Exercises 27 and 28, (a) rewrite the postulate in if-then form. Then (b) write the converse, inverse, and contrapositive and state which ones are true.

27. Two Point Postulate (Postulate 2.1)
28. Plane-Point Postulate (Postulate 2.5)

29. **REASONING** Choose the correct symbol to go between the statements.

number of points to determine a line \( \geq \) number of points to determine a plane

30. **CRITICAL THINKING** If two lines intersect, then they intersect in exactly one point by the Line Intersection Postulate (Postulate 2.3). Do the two lines have to be in the same plane? Draw a picture to support your answer. Then explain your reasoning.

31. **MAKING AN ARGUMENT** Your friend claims that even though two planes intersect in a line, it is possible for three planes to intersect in a point. Is your friend correct? Explain your reasoning.

32. **MAKING AN ARGUMENT** Your friend claims that by the Plane Intersection Postulate (Post. 2.7), any two planes intersect in a line. Is your friend’s interpretation of the Plane Intersection Postulate (Post. 2.7) correct? Explain your reasoning.

33. **ABSTRACT REASONING** Points $E$, $F$, and $G$ all lie in plane $P$ and in plane $Q$. What must be true about points $E$, $F$, and $G$ so that planes $P$ and $Q$ are different planes? What must be true about points $E$, $F$, and $G$ to force planes $P$ and $Q$ to be the same plane? Make sketches to support your answers.

34. **THOUGHT PROVOKING** The postulates in this book represent Euclidean geometry. In spherical geometry, all points are points on the surface of a sphere. A line is a circle on the sphere whose diameter is equal to the diameter of the sphere. A plane is the surface of the sphere. Find a postulate on page 84 that is not true in spherical geometry. Explain your reasoning.

**Maintaining Mathematical Proficiency** Reviewing what you learned in previous grades and lessons

Solve the equation. Tell which algebraic property of equality you used.  

(Skills Review Handbook)

35. $t - 6 = -4$  
36. $3x = 21$  
37. $9 + x = 13$  
38. $rac{x}{7} = 5$
