8.3 Using Midpoint and Distance Formulas

Essential Question: How can you find the midpoint and length of a line segment in a coordinate plane?

Exploration 1: Finding the Midpoint of a Line Segment

Work with a partner. Use centimeter graph paper.

a. Graph \( \overline{AB} \), where the points \( A \) and \( B \) are as shown.

b. Explain how to bisect \( \overline{AB} \), that is, to divide \( \overline{AB} \) into two congruent line segments. Then bisect \( \overline{AB} \) and use the result to find the midpoint \( M \) of \( AB \).

c. What are the coordinates of the midpoint \( M \)?

d. Compare the \( x \)-coordinates of \( A \), \( B \), and \( M \). Compare the \( y \)-coordinates of \( A \), \( B \), and \( M \). How are the coordinates of the midpoint \( M \) related to the coordinates of \( A \) and \( B \)?
8.3 Lesson

What You Will Learn

- Find segment lengths using midpoints and segment bisectors.
- Use the Midpoint Formula.
- Use the Distance Formula.

Midpoints and Segment Bisectors

Core Vocabulary

midpoint, p. 396
segment bisector, p. 396

REASONING

The word *bisect* means “to cut into two equal parts.”

Core Concept

Midpoints and Segment Bisectors

The *midpoint* of a segment is the point that divides the segment into two congruent segments.

![Diagram](image)

- **EXAMPLE 1** Finding Segment Lengths

In the skateboard design, \( \overline{VW} \) bisects \( \overline{XY} \) at point \( T \), and \( XT = 39.9 \text{ cm} \). Find \( XY \).

**SOLUTION**

Point \( T \) is the midpoint of \( \overline{XY} \). So, \( XT = TY = 39.9 \text{ cm} \).

\[
XY = XT + TY \\
= 39.9 + 39.9 \\
= 79.8
\]

So, the length of \( \overline{XY} \) is 79.8 centimeters.

Monitoring Progress

Identify the segment bisector of \( \overline{PQ} \). Then find \( PQ \).

1. \( P \quad \underline{1\frac{7}{8}} \quad M \quad \underline{7\frac{3}{4}} \quad Q \)

2. \( P \quad \underline{2\frac{2}{7}} \quad M \quad \underline{7\frac{3}{4}} \quad Q \)

Reading

The word *bisect* means “to cut into two equal parts.”

Midpoint, p. 396
Segment bisector, p. 396

Core Vocabulary

midpoint, p. 396
segment bisector, p. 396
Using Algebra with Segment Lengths

Point $M$ is the midpoint of $\overline{VW}$. Find the length of $\overline{VM}$.

**SOLUTION**

**Step 1** Write and solve an equation. Use the fact that $\overline{VM} = \overline{MW}$.

\[
\begin{align*}
\overline{VM} &= \overline{MW} \\
4x - 1 &= 3x + 3 \\
4x - 3x &= 3 + 1 \\
x &= 4
\end{align*}
\]

**Step 2** Evaluate the expression for $\overline{VM}$ when $x = 4$.

\[
\overline{VM} = 4x - 1 = 4(4) - 1 = 15
\]

So, the length of $\overline{VM}$ is 15.

**Monitoring Progress**

Help in English and Spanish at BigIdeasMath.com

3. Identify the segment bisector of $\overline{PQ}$. Then find $\overline{MQ}$.

4. Identify the segment bisector of $\overline{RS}$. Then find $\overline{RS}$.

**CONSTRUCTION**

Bisecting a Segment

Construct a segment bisector of $\overline{AB}$ by paper folding. Then find the midpoint $M$ of $\overline{AB}$.

**SOLUTION**

**Step 1** Draw the segment

Draw $\overline{AB}$ on a piece of paper.

**Step 2** Fold the paper

Fold the paper so that $B$ is on top of $A$.

**Step 3** Label the midpoint

Label point $M$. Compare $AM$, $MB$, and $AB$.

$AM = MB = \frac{1}{2}AB$
Using the Midpoint Formula

You can use the coordinates of the endpoints of a segment to find the coordinates of the midpoint.

Core Concept

The Midpoint Formula

The coordinates of the midpoint of a segment are the averages of the \(x\)-coordinates and of the \(y\)-coordinates of the endpoints. If \(A(x_1, y_1)\) and \(B(x_2, y_2)\) are points in a coordinate plane, then the midpoint \(M\) of \(AB\) has coordinates \((\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2})\).

EXAMPLE 3 Using the Midpoint Formula

a. The endpoints of \(\overline{RS}\) are \(R(1, -3)\) and \(S(4, 2)\). Find the coordinates of the midpoint \(M\).

b. The midpoint of \(\overline{JK}\) is \(M(2, 1)\). One endpoint is \(J(1, 4)\). Find the coordinates of endpoint \(K\).

SOLUTION

a. Use the Midpoint Formula.

\[
M\left(\frac{1 + 4}{2}, \frac{-3 + 2}{2}\right) = M\left(\frac{5}{2}, -\frac{1}{2}\right)
\]

The coordinates of the midpoint \(M\) are \(\left(\frac{5}{2}, -\frac{1}{2}\right)\).

b. Let \((x, y)\) be the coordinates of endpoint \(K\). Use the Midpoint Formula.

Step 1 Find \(x\).
\[
\frac{1 + x}{2} = 2
\]
\[
1 + x = 4
\]
\[
x = 3
\]

Step 2 Find \(y\).
\[
\frac{4 + y}{2} = 1
\]
\[
4 + y = 2
\]
\[
y = -2
\]

The coordinates of endpoint \(K\) are \((3, -2)\).

Monitoring Progress

5. The endpoints of \(\overline{AB}\) are \(A(1, 2)\) and \(B(7, 8)\). Find the coordinates of the midpoint \(M\).

6. The endpoints of \(\overline{CD}\) are \(C(-4, 3)\) and \(D(-6, 5)\). Find the coordinates of the midpoint \(M\).

7. The midpoint of \(\overline{TU}\) is \(M(2, 4)\). One endpoint is \(T(1, 1)\). Find the coordinates of endpoint \(U\).

8. The midpoint of \(\overline{WW}\) is \(M(-1, -2)\). One endpoint is \(W(4, 4)\). Find the coordinates of endpoint \(V\).
Using the Distance Formula

You can use the Distance Formula to find the distance between two points in a coordinate plane.

**Core Concept**

The Distance Formula

If \(A(x_1, y_1)\) and \(B(x_2, y_2)\) are points in a coordinate plane, then the distance between \(A\) and \(B\) is

\[ AB = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \]

The Distance Formula is related to the **Pythagorean Theorem**, which you will see again when you work with right triangles in a future course.

**EXAMPLE 4**

Using the Distance Formula

Your school is 4 miles east and 1 mile south of your apartment. A recycling center, where your class is going on a field trip, is 2 miles east and 3 miles north of your apartment. Estimate the distance between the recycling center and your school.

**SOLUTION**

You can model the situation using a coordinate plane with your apartment at the origin \((0, 0)\). The coordinates of the recycling center and the school are \(R(2, 3)\) and \(S(4, -1)\), respectively. Use the Distance Formula. Let \((x_1, y_1) = (2, 3)\) and \((x_2, y_2) = (4, -1)\).

\[
RS = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}
\]

\[
= \sqrt{(4 - 2)^2 + (-1 - 3)^2}
\]

\[
= \sqrt{2^2 + (-4)^2}
\]

\[
= \sqrt{4 + 16}
\]

\[
= \sqrt{20}
\]

\[
\approx 4.5
\]

So, the distance between the recycling center and your school is about 4.5 miles.

**Monitoring Progress**

9. In Example 4, a park is 3 miles east and 4 miles south of your apartment. Find the distance between the park and your school.
8.3 Exercises

Vocabulary and Core Concept Check

1. **VOCABULARY** If a point, ray, line, line segment, or plane intersects a segment at its midpoint, then what does it do to the segment?

2. **COMPLETE THE SENTENCE** To find the length of \( \overline{AB} \), with endpoints \( A(-7, 5) \) and \( B(4, -6) \), you can use the _____________.

Monitoring Progress and Modeling with Mathematics

In Exercises 3–6, identify the segment bisector of \( \overline{RS} \). Then find \( RS \). (See Example 1.)

3. 
   \[ R \quad M \quad S \]
   \[ 17 \]

4. 
   \[ R \quad M \quad S \]
   \[ 9 \]

5. 
   \[ R \quad M \quad S \]
   \[ 22 \]

6. 
   \[ R \quad M \quad S \]
   \[ 12 \]

In Exercises 7 and 8, identify the segment bisector of \( \overline{JK} \). Then find \( JM \). (See Example 2.)

7. 
   \[ J \quad M \quad K \]
   \[ 7x + 5 \]

8. 
   \[ J \quad M \quad K \]
   \[ 3x + 15 \]

In Exercises 9 and 10, identify the segment bisector of \( \overline{XY} \). Then find \( XY \). (See Example 2.)

9. 
   \[ X \quad M \quad Y \]
   \[ 3x + 1 \]

10. 
    \[ X \quad M \quad Y \]
    \[ 5x + 8 \]

CONSTRUCTION In Exercises 11–14, copy the segment and construct a segment bisector by paper folding. Then label the midpoint \( M \).

11. 
   \[ A \quad M \quad B \]

12. 
   \[ C \quad M \quad D \]

13. 

14. 
   \[ G \quad M \quad H \]

400 Chapter 8 Basics of Geometry
In Exercises 15–18, the endpoints of \( \overline{CD} \) are given. Find the coordinates of the midpoint \( M \). (See Example 3.)

15. \( C(3, -5) \) and \( D(7, 9) \)
16. \( C(-4, 7) \) and \( D(0, -3) \)
17. \( C(-2, 0) \) and \( D(4, 9) \)
18. \( C(-8, -6) \) and \( D(-4, 10) \)

In Exercises 19–22, the midpoint \( M \) and one endpoint of \( \overline{GH} \) are given. Find the coordinates of the other endpoint. (See Example 3.)

19. \( G(5, -6) \) and \( M(4, 3) \)
20. \( H(-3, 7) \) and \( M(-2, 5) \)
21. \( H(-2, 9) \) and \( M(8, 0) \)
22. \( G(-4, 1) \) and \( M\left(-\frac{13}{2}, -6\right)\)

In Exercises 23–30, find the distance between the two points. (See Example 4.)

23. \( A(13, 2) \) and \( B(7, 10) \)
24. \( C(-6, 5) \) and \( D(-3, 1) \)
25. \( E(3, 7) \) and \( F(6, 5) \)
26. \( G(-5, 4) \) and \( H(2, 6) \)
27. \( J(-8, 0) \) and \( K(1, 4) \)
28. \( L(7, -1) \) and \( M(-2, 4) \)
29. \( R(0, 1) \) and \( S(6, 3.5) \)
30. \( T(13, 1.6) \) and \( V(5.4, 3.7) \)

ERROR ANALYSIS In Exercises 31 and 32, describe and correct the error in finding the distance between \( A(6, 2) \) and \( B(1, -4) \).

31. \( AB = (6 - 1)^2 + [2 - (-4)]^2 \)
   \[ = 5^2 + 6^2 \]
   \[ = 25 + 36 \]
   \[ = 61 \]
   \[ \times \]

32. \( AB = \sqrt{(6 - 2)^2 + [1 - (-4)]^2} \)
   \[ = \sqrt{4^2 + 5^2} \]
   \[ = \sqrt{16 + 25} \]
   \[ = \sqrt{41} \]
   \[ = 6.4 \]
   \[ \times \]

COMPARING SEGMENTS In Exercises 33 and 34, the endpoints of two segments are given. Find each segment length. Tell whether the segments are congruent. If they are not congruent, state which segment length is greater.

33. \( AB: A(0, 2), B(-3, 8) \) and \( CD: C(-2, 2), D(0, -4) \)
34. \( EF: E(1, 4), F(5, 1) \) and \( GH: G(-3, 1), H(1, 6) \)

35. WRITING Your friend is having trouble understanding the Midpoint Formula.
   a. Explain how to find the midpoint when given the two endpoints in your own words.
   b. Explain how to find the other endpoint when given one endpoint and the midpoint in your own words.

36. PROBLEM SOLVING In baseball, the strike zone is the region a baseball needs to pass through for the umpire to declare it a strike when the batter does not swing. The top of the strike zone is a horizontal plane passing through the midpoint of the top of the batter’s shoulders and the top of the uniform pants when the player is in a batting stance. Find the height of \( T \). (Note: All heights are in inches.)

37. MODELING WITH MATHEMATICS The figure shows the position of three players during part of a water polo match. Player A throws the ball to Player B, who then throws the ball to Player C.

a. How far did Player A throw the ball? Player B?
b. How far would Player A have to throw the ball to throw it directly to Player C?
38. **MODELING WITH MATHEMATICS** Your school is 20 blocks east and 12 blocks south of your house. The mall is 10 blocks north and 7 blocks west of your house. You plan on going to the mall right after school. Find the distance between your school and the mall assuming there is a road directly connecting the school and the mall. One block is 0.1 mile.

39. **PROBLEM SOLVING** A path goes around a triangular park, as shown.

```
\[ P \]  x

Distance (yd)

\[ Q \] 20  40

\[ R \] 60

Distance (yd)
```

- **a.** Find the distance around the park to the nearest yard.
- **b.** A new path and a bridge are constructed from point \( Q \) to the midpoint \( M \) of \( PR \). Find \( QM \) to the nearest yard.
- **c.** A man jogs from \( P \) to \( Q \) to \( M \) to \( R \) to \( Q \) and back to \( P \) at an average speed of 150 yards per minute. About how many minutes does it take? Explain your reasoning.

40. **MAKING AN ARGUMENT** Your friend claims there is an easier way to find the length of a segment than the Distance Formula when the \( x \)-coordinates of the endpoints are equal. He claims all you have to do is subtract the \( y \)-coordinates. Do you agree with his statement? Explain your reasoning.

41. **MATHEMATICAL CONNECTIONS** Two points are located at \((a, c)\) and \((b, c)\). Find the midpoint and the distance between the two points.

42. **HOW DO YOU SEE IT?** \( AB \) contains midpoint \( M \) and points \( C \) and \( D \), as shown. Compare the lengths. If you cannot draw a conclusion, write impossible to tell. Explain your reasoning.

```
A

C

M

D

B
```

- **a.** \( AM \) and \( MB \)
- **b.** \( AC \) and \( MB \)
- **c.** \( MC \) and \( MD \)
- **d.** \( MB \) and \( DB \)

43. **ABSTRACT REASONING** Use the diagram in Exercise 42. The points on \( AB \) represent locations you pass on your commute to work. You travel from your home at location \( A \) to location \( M \) before realizing that you left your lunch at home. You could turn around to get your lunch and then continue to work at location \( B \). Or you could go to work and go to location \( D \) for lunch today. You want to choose the option that involves the least distance you must travel. Which option should you choose? Explain your reasoning.

44. **THOUGHT PROVOKING** Describe three ways to divide a rectangle into two congruent regions. Do the regions have to be triangles? Use a diagram to support your answer.

45. **ANALYZING RELATIONSHIPS** The length of \( \overline{XY} \) is 24 centimeters. The midpoint of \( \overline{XY} \) is \( M \), and \( C \) is on \( \overline{XM} \) so that \( XC \) is \( \frac{2}{3} \) of \( X \). Point \( D \) is on \( \overline{MY} \) so that \( MD \) is \( \frac{3}{4} \) of \( MY \). What is the length of \( CD \) ?

### Maintaining Mathematical Proficiency

**Find the perimeter and area of the figure.** (Skills Review Handbook)

46. [Diagram of a rectangle with dimensions 5 cm x 10 ft]

47. [Diagram of a rectangle with dimensions 3 ft x 3 ft]

48. [Diagram of a triangle with sides 3 m, 5 m, and an angle between them]

49. [Diagram of a triangle with sides 13 yd, 12 yd, and an angle between them]

**Solve the inequality. Graph the solution.** (Section 2.2 and Section 2.3)

50. \( a + 18 < 7 \)

51. \( y - 5 \geq 8 \)

52. \( -3x > 24 \)

53. \( \frac{z}{4} \leq 12 \)
