## **Finding Surface Area**

**Example 1** Find the surface area of the prism.

 $S = 2\ell w + 2\ell h + 2wh$ 

$$= 2(2)(4) + 2(2)(6) + 2(4)(6)$$
$$= 16 + 24 + 48$$
$$= 88$$

Write formula for surface area of a rectangular prism.

Substitute 2 for  $\ell$ , 4 for w, and 6 for h. Multiply. Add.

The surface area is 88 square inches.

#### Find the surface area of the prism.

## **Finding a Missing Dimension**

Example 2 A rectangle has a perimeter of 10 meters and a length of 3 meters. What is the width of the rectangle?

 $P = 2\ell + 2w$ Write formula for perimeter of a rectangle.10 = 2(3) + 2wSubstitute 10 for P and 3 for  $\ell$ .10 = 6 + 2wMultiply 2 and 3.4 = 2wSubtract 6 from each side.2 = wDivide each side by 2.

• The width is 2 meters.

#### Find the missing dimension.

- **4.** A rectangle has a perimeter of 28 inches and a width of 5 inches. What is the length of the rectangle?
- **5.** A triangle has an area of 12 square centimeters and a height of 12 centimeters. What is the base of the triangle?
- **6.** A rectangle has an area of 84 square feet and a width of 7 feet. What is the length of the rectangle?
- **7. ABSTRACT REASONING** Write an equation for the surface area of a prism with a length, width, and height of *x* inches. What solid figure does the prism represent?

circumference, *p. 640* arc length, *p. 641* radian, *p. 643* 

Previous

circle diameter radius

# What You Will Learn

- Use the formula for circumference.
- Use arc lengths to find measures.
- Solve real-life problems.
- Measure angles in radians.

# Using the Formula for Circumference

The **circumference** of a circle is the distance around the circle. Consider a regular polygon inscribed in a circle. As the number of sides increases, the polygon approximates the circle and the ratio of the perimeter of the polygon to the diameter of the circle approaches  $\pi \approx 3.14159...$ 

For all circles, the ratio of the circumference *C* to the diameter *d* is the same. This ratio is  $\frac{C}{d} = \pi$ . Solving for *C* yields the formula for the circumference of a circle,  $C = \pi d$ . Because d = 2r, you can also write the formula as  $C = \pi (2r) = 2\pi r$ .

# G Core Concept

#### **Circumference of a Circle**

The circumference C of a circle is  $C = \pi d$ or  $C = 2\pi r$ , where d is the diameter of the circle and r is the radius of the circle.

#### EXAMPLE 1

#### Using the Formula for Circumference

Find each indicated measure.

- a. circumference of a circle with a radius of 9 centimeters
- b. radius of a circle with a circumference of 26 meters

#### SOLUTION

Help in English and Spanish at BigldeasMath.com

## Monitoring Progress

- 1. Find the circumference of a circle with a diameter of 5 inches.
- 2. Find the diameter of a circle with a circumference of 17 feet.

## ATTENDING TO PRECISION

You have sometimes used 3.14 to approximate the value of  $\pi$ . Throughout this chapter, you should use the  $\pi$  key on a calculator, then round to the hundredths place unless instructed otherwise.

## **Using Arc Lengths to Find Measures**

An **arc length** is a portion of the circumference of a circle. You can use the measure of the arc (in degrees) to find its length (in linear units).

# G Core Concept

#### Arc Length

In a circle, the ratio of the length of a given arc to the circumference is equal to the ratio of the measure of the arc to  $360^{\circ}$ .

 $\frac{\text{Arc length of } \overrightarrow{AB}}{2\pi r} = \frac{\overrightarrow{mAB}}{360^{\circ}}, \text{ or}$ Arc length of  $\overrightarrow{AB} = \frac{\overrightarrow{mAB}}{360^{\circ}} \cdot 2\pi r$ 

#### Using Arc Lengths to Find Measures

#### Find each indicated measure.

#### SOLUTION

a. Arc length of  $\widehat{AB} = \frac{60^{\circ}}{360^{\circ}} \cdot 2\pi(8)$   $\approx 8.38 \text{ cm}$ b.  $\frac{\text{Arc length of } \widehat{XY}}{C} = \frac{m\widehat{XY}}{360^{\circ}}$   $\frac{4.19}{C} = \frac{40^{\circ}}{360^{\circ}}$   $\frac{4.19}{C} = \frac{1}{9}$  37.71 in. = Cc.  $\frac{\text{Arc length of } \widehat{RS}}{2\pi r} = \frac{m\widehat{RS}}{360^{\circ}}$   $\frac{44}{2\pi(15.28)} = m\widehat{RS}$  $360^{\circ} \cdot \frac{44}{2\pi(15.28)} = m\widehat{RS}$ 

## Monitoring Progress

# Help in English and Spanish at *BigldeasMath.com*

#### Find the indicated measure.

## **Solving Real-Life Problems**

#### EXAMPLE 3

#### Using Circumference to Find Distance Traveled

The dimensions of a car tire are shown. To the nearest foot, how far does the tire travel when it makes 15 revolutions?

#### **SOLUTION**

**Step 1** Find the diameter of the tire.

d = 15 + 2(5.5) = 26 in.

**Step 2** Find the circumference of the tire.

 $C = \pi d = \pi \cdot 26 = 26\pi$  in.

Find the distance the tire travels in 15 revolutions. In one revolution, the tire Step 3 travels a distance equal to its circumference. In 15 revolutions, the tire travels a distance equal to 15 times its circumference.

 $= 15 \cdot 26\pi \approx 1225.2$  in.

Step 4 Use unit analysis. Change 1225.2 inches to feet.

1225.2 in. • 
$$\frac{1 \text{ ft}}{12 \text{ in.}} = 102.1 \text{ ft}$$

The tire travels approximately 102 feet.

EXAMPLE 4

#### Using Arc Length to Find Distances

The curves at the ends of the track shown are 180° arcs of circles. The radius of the arc for a runner on the red path shown is 36.8 meters. About how far does this runner travel to go once around the track? Round to the nearest tenth of a meter.

#### SOLUTION

The path of the runner on the red path is made of two straight sections and two semicircles. To find the total distance, find the sum of the lengths of each part.

The runner on the red path travels about 400.0 meters.

## Monitoring Progress Help in English and Spanish at BigldeasMath.com

- 6. A car tire has a diameter of 28 inches. How many revolutions does the tire make while traveling 500 feet?
- 7. In Example 4, the radius of the arc for a runner on the blue path is 44.02 meters, as shown in the diagram. About how far does this runner travel to go once around the track? Round to the nearest tenth of a meter.

**COMMON ERROR** 

Always pay attention to

units. In Example 3, you need to convert units to

get a correct answer.

## **Measuring Angles in Radians**

Recall that in a circle, the ratio of the length of a given arc to the circumference is equal to the ratio of the measure of the arc to 360°. To see why, consider the diagram.

A circle of radius 1 has circumference  $2\pi$ , so the arc length of  $\widehat{CD}$  is  $\frac{\widehat{mCD}}{360^\circ} \cdot 2\pi$ .

Recall that all circles are similar and corresponding lengths of similar figures are proportional. Because mAB = mCD,

AB and CD are corresponding arcs. So, you can write the following proportion.

$$\frac{\text{Arc length of } \widehat{AB}}{\text{Arc length of } \widehat{CD}} = \frac{r}{1}$$
Arc length of  $\widehat{AB} = r \cdot \text{Arc length of } \widehat{CD}$ 
Arc length of  $\widehat{AB} = r \cdot \frac{\widehat{mCD}}{360^\circ} \cdot 2\pi$ 

This form of the equation shows that the arc length associated with a central angle is proportional to the radius of the circle. The constant of proportionality,  $\frac{mCD}{360^{\circ}} \cdot 2\pi$ , is defined to be the **radian** measure of the central angle associated with the arc.

In a circle of radius 1, the radian measure of a given central angle can be thought of as the length of the arc associated with the angle. The radian measure of a complete circle (360°) is exactly  $2\pi$  radians, because the circumference of a circle of radius 1 is exactly  $2\pi$ . You can use this fact to convert from degree measure to radian measure and vice versa.

# 🗿 Core Concept

#### **Converting between Degrees and Radians**

Degrees to radians	Radians to degrees
Multiply degree measure by	Multiply radian measure by
$\frac{2\pi \text{ radians}}{360^{\circ}}$ , or $\frac{\pi \text{ radians}}{180^{\circ}}$ .	$\frac{360^{\circ}}{2\pi \text{ radians}}$ , or $\frac{180^{\circ}}{\pi \text{ radians}}$

**EXAMPLE 5 Converting between Degree and Radian Measure** 

**a.** Convert 45° to radians.

**b.** Convert  $\frac{3\pi}{2}$  radians to degrees.

#### **SOLUTION**

- So,  $45^\circ = \frac{\pi}{4}$  radian.

Monitoring Progress APP Help in English and Spanish at BigldeasMath.com

**8.** Convert 15° to radians.

- **a.**  $45^{\circ} \cdot \frac{\pi \text{ radians}}{180^{\circ}} = \frac{\pi}{4} \text{ radian}$  **b.**  $\frac{3\pi}{2} \text{ radians} \cdot \frac{180^{\circ}}{\pi \text{ radians}} = 270^{\circ}$ So,  $\frac{3\pi}{2}$  radians = 270°.

**11. ERROR ANALYSIS** Describe and correct the error in finding the circumference of  $\bigcirc C$ .

**12. ERROR ANALYSIS** Describe and correct the error in finding the length of  $\widehat{GH}$ .

- **13. PROBLEM SOLVING** A measuring wheel is used to calculate the length of a path. The diameter of the wheel is 8 inches. The wheel makes 87 complete revolutions along the length of the path. To the nearest foot, how long is the path? (*See Example 3.*)
- **14. PROBLEM SOLVING** You ride your bicycle 40 meters. How many complete revolutions does the front wheel make?

**In Exercises 19–22, convert the angle measure.** (*See Example 5.*)

- **19.** Convert  $70^{\circ}$  to radians.
- **20.** Convert 300° to radians.
- **21.** Convert  $\frac{11\pi}{12}$  radians to degrees.
- **22.** Convert  $\frac{\pi}{8}$  radian to degrees.
- **23. PROBLEM SOLVING** The London Eye is a Ferris wheel in London, England, that travels at a speed of 0.26 meter per second. How many minutes does it take the London Eye to complete one full revolution?

24. PROBLEM SOLVING You are planning to plant a circular garden adjacent to one of the corners of a building, as shown. You can use up to 38 feet of fence to make a border around the garden. What radius (in feet) can the garden have? Choose all that apply. Explain your reasoning.

In Exercises 25 and 26, find the circumference of the circle with the given equation. Write the circumference in terms of  $\pi$ .

- **25.**  $x^2 + y^2 = 16$
- **26.**  $(x+2)^2 + (y-3)^2 = 9$
- **27.** USING STRUCTURE A semicircle has endpoints (-2, 5) and (2, 8). Find the arc length of the semicircle.
- **28. REASONING**  $\widehat{EF}$  is an arc on a circle with radius *r*. Let  $x^\circ$  be the measure of  $\widehat{EF}$ . Describe the effect on the length of  $\widehat{EF}$  if you (a) double the radius of the circle, and (b) double the measure of  $\widehat{EF}$ .
- **29. MAKING AN ARGUMENT** Your friend claims that it is possible for two arcs with the same measure to have different arc lengths. Is your friend correct? Explain your reasoning.
- **30. PROBLEM SOLVING** Over 2000 years ago, the Greek scholar Eratosthenes estimated Earth's circumference by assuming that the Sun's rays were parallel. He chose a day when the Sun shone straight down into a well in the city of Syene. At noon, he measured the angle the Sun's rays made with a vertical stick in the city of Alexandria. Eratosthenes assumed that the distance from Syene to Alexandria was equal to about 575 miles. Explain how Eratosthenes was able to use this information to estimate Earth's circumference. Then estimate Earth's circumference.

**31.** ANALYZING RELATIONSHIPS In  $\bigcirc C$ , the ratio of the length of  $\widehat{PQ}$  to the length of  $\widehat{RS}$  is 2 to 1. What is the ratio of  $m \angle PCQ$  to  $m \angle RCS$ ?

<b>A</b> 4 to 1	<b>B</b> 2 to 1
$\bigcirc$	$\sim$

- (C) 1 to 4 (D) 1 to 2
- **32.** ANALYZING RELATIONSHIPS A 45° arc in  $\bigcirc C$  and a 30° arc in  $\bigcirc P$  have the same length. What is the ratio of the radius  $r_1$  of  $\bigcirc C$  to the radius  $r_2$  of  $\bigcirc P$ ? Explain your reasoning.

**33. PROBLEM SOLVING** How many revolutions does the smaller gear complete during a single revolution of the larger gear?

- **34.** USING STRUCTURE Find the circumference of each circle.
  - a. a circle circumscribed about a right triangle whose legs are 12 inches and 16 inches long
  - **b.** a circle circumscribed about a square with a side length of 6 centimeters
  - c. a circle inscribed in an equilateral triangle with a side length of 9 inches
- **35. REWRITING A FORMULA** Write a formula in terms of the measure  $\theta$  of the central angle (in radians) that can be used to find the length of an arc of a circle. Then use this formula to find the length of an arc of a circle with a radius of 4 inches and a central angle of  $\frac{3\pi}{4}$  radians.

#### 36. HOW DO YOU SEE IT?

Compare the circumference of  $\bigcirc P$  to the length of DE. Explain your reasoning.

**37. MAKING AN ARGUMENT** In the diagram, the measure of the red shaded angle is  $30^{\circ}$ . The arc length *a* is 2. Your classmate claims that it is possible to find the circumference of the blue circle without finding the radius of either circle. Is your classmate correct? Explain your reasoning.

- **38. MODELING WITH MATHEMATICS** What is the measure (in radians) of the angle formed by the hands of a clock at each time? Explain your reasoning.
  - а. 1:30 р.м. **b.** 3:15 P.M.
- **39.** MATHEMATICAL CONNECTIONS The sum of the circumferences of circles A, B, and C is  $63\pi$ . Find AC.

- **40. THOUGHT PROVOKING** Is  $\pi$  a rational number? Compare the rational number  $\frac{355}{113}$  to  $\pi$ . Find a different rational number that is even closer to  $\pi$ .
- **41. PROOF** The circles in the diagram are concentric and  $\overline{FG} \cong \overline{GH}$ . Prove that  $\widehat{JK}$  and  $\widehat{NG}$  have the same length.

**42. REPEATED REASONING**  $\overline{AB}$  is divided into four congruent segments, and semicircles with radius r are drawn.

- **a.** What is the sum of the four arc lengths?
- **b.** What would the sum of the arc lengths be if AB was divided into 8 congruent segments? 16 congruent segments? n congruent segments? Explain your reasoning.

## Maintaining Mathematical Proficiency Reviewing what you learned in previous grades and lessons

Find the area of the polygon with the given vertices. (Skills Review Handbook) **43.** X(2, 4), Y(8, -1), Z(2, -1)**44.** L(-3, 1), M(4, 1), N(4, -5), P(-3, -5)

# **11.2** Areas of Circles and Sectors

**Essential Question** How can you find the area of a sector of a circle?

#### **EXPLORATION 1**

#### Finding the Area of a Sector of a Circle

Work with a partner. A sector of a circle is the region bounded by two radii of the circle and their intercepted arc. Find the area of each shaded circle or sector of a circle.

a. entire circle

c. seven-eighths of a circle

**b.** one-fourth of a circle

**d.** two-thirds of a circle

#### REASONING ABSTRACTLY

To be proficient in math, you need to explain to yourself the meaning of a problem and look for entry points to its solution.

#### **EXPLORATION 2**

#### Finding the Area of a Circular Sector

**Work with a partner.** A center pivot irrigation system consists of 400 meters of sprinkler equipment that rotates around a central pivot point at a rate of once every 3 days to irrigate a circular region with a diameter of 800 meters. Find the area of the sector that is irrigated by this system in one day.

# **Communicate Your Answer**

- 3. How can you find the area of a sector of a circle?
- 4. In Exploration 2, find the area of the sector that is irrigated in 2 hours.

# **11.2** Lesson

## Core Vocabulary

geometric probability, p. 649 sector of a circle, p. 650

#### Previous

circle radius diameter intercepted arc

# What You Will Learn

- Use the formula for the area of a circle.
- Find areas of sectors.
- Use areas of sectors.

# Using the Formula for the Area of a Circle

You can divide a circle into congruent sections and rearrange the sections to form a figure that approximates a parallelogram. Increasing the number of congruent sections increases the figure's resemblance to a parallelogram.

The base of the parallelogram that the figure approaches

 $C = 2\pi r$ 

is half of the circumference, so  $b = \frac{1}{2}C = \frac{1}{2}(2\pi r) = \pi r$ . The height is the radius, so h = r. So, the area of the parallelogram is  $A = bh = (\pi r)(r) = \pi r^2$ .

#### Area of a Circle

The area of a circle is

 $A = \pi r^2$ 

where *r* is the radius of the circle.

#### EXAMPLE 1

1 Using the Formula for the Area of a Circle

Find each indicated measure.

a. area of a circle with a radius of 2.5 centimeters

b. diameter of a circle with an area of 113.1 square centimeters

#### **SOLUTION**

а.

$A = \pi r^2$	Formula for area of a circle
$= \pi \bullet (2.5)^2$	Substitute 2.5 for <i>r</i> .
$= 6.25 \pi$	Simplify.
≈ 19.63	Use a calculator.
The error of the si	ale is about 10.62 square conti

The area of the circle is about 19.63 square centimeters.

b.	$A = \pi r^2$	Formula for area of a circle
	$113.1 = \pi r^2$	Substitute 113.1 for A.
	$\frac{113.1}{\pi} = r^2$	Divide each side by $\pi$ .
	$6 \approx r$	Find the positive square root of each side

The radius is about 6 centimeters, so the diameter is about 12 centimeters.

# Monitoring Progress Help in English and Spanish at BigldeasMath.com

- 1. Find the area of a circle with a radius of 4.5 meters.
- 2. Find the radius of a circle with an area of 176.7 square feet.

Probabilities found by calculating a ratio of two lengths, areas, or volumes are called geometric probabilities.

You throw a dart at the board shown. Your dart is equally likely to hit any point inside the square board. Are you more likely to get 10 points or 0 points?

#### **SOLUTION**

The probability of getting 10 points is

$$P(10 \text{ points}) = \frac{\text{Area of smallest circle}}{\text{Area of entire board}}$$
$$= \frac{\pi \cdot 3^2}{18^2}$$
$$= \frac{9\pi}{324}$$
$$= \frac{\pi}{36}$$
$$\approx 0.0873.$$

The probability of getting 0 points is

.

$$P(0 \text{ points}) = \frac{\text{Area outside largest circle}}{\text{Area of entire board}}$$
$$= \frac{18^2 - (\pi \cdot 9^2)}{18^2}$$
$$= \frac{324 - 81\pi}{324}$$
$$= \frac{4 - \pi}{4}$$
$$\approx 0.215.$$

You are more likely to get 0 points.

Help in English and Spanish at *BigldeasMath.com* Monitoring Progress

Use the diagram in Example 2.

- **3.** Are you more likely to get 10 points or 5 points?
- 4. Are you more likely to get 2 points or 0 points?
- 5. Are you more likely to get 5 or more points or 2 or less points?
- 6. Are you more likely to score points (10, 5, or 2) or get 0 points?

## **Finding Areas of Sectors**

A **sector of a circle** is the region bounded by two radii of the circle and their intercepted arc. In the diagram below, sector *APB* is bounded by  $\overline{AP}$ ,  $\overline{BP}$ , and  $\overline{AB}$ .

#### ANALYZING RELATIONSHIPS

The area of a sector is a fractional part of the area of a circle. The area of a sector formed by a 45° arc is  $\frac{45^{\circ}}{360^{\circ}}$ , or  $\frac{1}{8}$  of the area of the circle.

# 💪 Core Concept

#### Area of a Sector

The ratio of the area of a sector of a circle to the area of the whole circle  $(\pi r^2)$  is equal to the ratio of the measure of the intercepted arc to  $360^\circ$ .

$$\frac{\text{Area of sector } APB}{\pi r^2} = \frac{mAB}{360^\circ}, \text{ or}$$

Area of sector 
$$APB = \frac{m\widehat{AB}}{360^\circ} \cdot \pi r^2$$

,

#### **Finding Areas of Sectors**

Find the areas of the sectors formed by  $\angle UTV$ .

#### **SOLUTION**

**Step 1** Find the measures of the minor and major arcs.

Because 
$$m \angle UTV = 70^\circ$$
,  $\widehat{mUV} = 70^\circ$  and  $\widehat{mUSV} = 360^\circ - 70^\circ = 290^\circ$ .

Step 2 Find the areas of the small and large sectors.

Area of small sector $=\frac{m\widehat{UV}}{360^\circ} \cdot \pi r^2$	Formula for area of a sector
$=\frac{70^{\circ}}{360^{\circ}}\bullet\pi\bullet8^{2}$	Substitute.
≈ 39.10	Use a calculator.
Area of large sector $=\frac{m\widehat{USV}}{360^\circ} \cdot \pi r^2$	Formula for area of a sector
$=\frac{290^{\circ}}{360^{\circ}}\bullet\pi\bullet8^{2}$	Substitute.
≈ 161.97	Use a calculator.

The areas of the small and large sectors are about 39.10 square inches and about 161.97 square inches, respectively.

**Monitoring Progress** 

#### Find the indicated measure.

- 7. area of red sector
- 8. area of blue sector

Help in English and Spanish at BigldeasMath.com

## **Using Areas of Sectors**

**EXAMPLE 4** 

Using the Area of a Sector

Find the area of  $\bigcirc V$ .

#### **SOLUTION**

Area of sector  $TVU = \frac{m\widehat{TU}}{360^\circ} \cdot \text{Area of } \odot V$  $35 = \frac{40^\circ}{360^\circ} \cdot \text{Area of } \odot V$  $315 = \text{Area of } \odot V$ 

Formula for area of a sector

Substitute.

Solve for area of  $\odot V$ .

The area of  $\bigcirc V$  is 315 square meters.

EXAMPLE 5

#### Finding the Area of a Region

A rectangular wall has an entrance cut into it. You want to paint the wall. To the nearest square foot, what is the area of the region you need to paint?

#### **SOLUTION**

#### COMMON ERROR

Use the radius (8 feet), not the diameter (16 feet), when you calculate the area of the semicircle. The area you need to paint is the area of the rectangle minus the area of the entrance. The entrance can be divided into a semicircle and a square.

Area of wall = Area of rectangle - (Area of semicircle + Area of square)  

$$= 36(26) - \left[\frac{180^{\circ}}{360^{\circ}} \cdot (\pi \cdot 8^{2}) + 16^{2}\right]$$

$$= 936 - (32\pi + 256)$$

$$\approx 579.47$$

The area you need to paint is about 579 square feet.

In Exercises 19–22, find the areas of the sectors formed by  $\angle DFE$ . (See Example 3.)

23. ERROR ANALYSIS Describe and correct the error in finding the area of the circle.

24. ERROR ANALYSIS Describe and correct the error in finding the area of sector *XZY* when the area of  $\odot Z$ is 255 square feet.

In Exercises 25 and 26, the area of the shaded sector is shown. Find the indicated measure. (*See Example 4.*)

**25.** area of *⊙M* 

**26.** radius of  $\bigcirc M$ 

**In Exercises 27–32, find the area of the shaded region.** (*See Example 5.*)

**33. PROBLEM SOLVING** The diagram shows the shape of a putting green at a miniature golf course. One part of the green is a sector of a circle. Find the area of the putting green.

- **34. MAKING AN ARGUMENT** Your friend claims that if the radius of a circle is doubled, then its area doubles. Is your friend correct? Explain your reasoning.
- **35. MODELING WITH MATHEMATICS** The diagram shows the area of a lawn covered by a water sprinkler.

- **a.** What is the area of the lawn that is covered by the sprinkler?
- **b.** The water pressure is weakened so that the radius is 12 feet. What is the area of the lawn that will be covered?
- **36. MODELING WITH MATHEMATICS** The diagram shows a projected beam of light from a lighthouse.

- **a.** What is the area of water that can be covered by the light from the lighthouse?
- **b.** What is the area of land that can be covered by the light from the lighthouse?
- **37. ANALYZING RELATIONSHIPS** Look back at the Perimeters of Similar Polygons Theorem and the Areas of Similar Polygons Theorem in Section 8.3. How would you rewrite these theorems to apply to circles? Explain your reasoning.
- **38. ANALYZING RELATIONSHIPS** A square is inscribed in a circle. The same square is also circumscribed about a smaller circle. Draw a diagram that represents this situation. Then find the ratio of the area of the larger circle to the area of the smaller circle.

**39. CONSTRUCTION** The table shows how students get to school.

Method	Percent of students
bus	65%
walk	25%
other	10%

- **a.** Explain why a circle graph is appropriate for the data.
- **b.** You will represent each method by a sector of a circle graph. Find the central angle to use for each sector. Then construct the graph using a radius of 2 inches.
- **c.** Find the area of each sector in your graph.
- **40. HOW DO YOU SEE IT?** The outermost edges of the pattern shown form a square. If you know the dimensions of the outer square, is it possible to compute the total colored area? Explain.

- **41. ABSTRACT REASONING** A circular pizza with a 12-inch diameter is enough for you and 2 friends. You want to buy pizzas for yourself and 7 friends. A 10-inch diameter pizza with one topping costs \$6.99 and a 14-inch diameter pizza with one topping costs \$12.99. How many 10-inch and 14-inch pizzas should you buy in each situation? Explain.
  - a. You want to spend as little money as possible.
  - **b.** You want to have three pizzas, each with a different topping, and spend as little money as possible.
  - **c.** You want to have as much of the thick outer crust as possible.

# Maintaining Mathematical Proficiency

**42. THOUGHT PROVOKING** You know that the area of a circle is  $\pi r^2$ . Find the formula for the area of an *ellipse*, shown below.

- **43. MULTIPLE REPRESENTATIONS** Consider a circle with a radius of 3 inches.
  - **a.** Complete the table, where *x* is the measure of the arc and *y* is the area of the corresponding sector. Round your answers to the nearest tenth.

x	30°	60°	90°	120°	150°	180°
у						

- **b.** Graph the data in the table.
- **c.** Is the relationship between *x* and *y* linear? Explain.
- **d.** If parts (a)–(c) were repeated using a circle with a radius of 5 inches, would the areas in the table change? Would your answer to part (c) change? Explain your reasoning.
- **44. CRITICAL THINKING** Find the area between the three congruent tangent circles. The radius of each circle is 6 inches.

**45. PROOF** Semicircles with diameters equal to three sides of a right triangle are drawn, as shown. Prove that the sum of the areas of the two shaded crescents equals the area of the triangle.

Reviewing what you learned in previous grades and lessons

# **11.3** Areas of Polygons

# Essential Question How can you find the area of a regular

polygon?

The **center of a regular polygon** is the center of its circumscribed circle.

The distance from the center to any side of a regular polygon is called the **apothem of a regular polygon**.

#### **EXPLORATION 1**

#### Finding the Area of a Regular Polygon

**Work with a partner.** Use dynamic geometry software to construct each regular polygon with side lengths of 4, as shown. Find the apothem and use it to find the area of the polygon. Describe the steps that you used.

# **Communicate Your Answer**

- **3.** How can you find the area of a regular polygon?
- **4.** Regular pentagon *ABCDE* has side lengths of 6 meters and an apothem of approximately 4.13 meters. Find the area of *ABCDE*.

To be proficient in math, you need to know and flexibly use different properties of operations and objects.

#### Previous

rhombus kite

# What You Will Learn

- Find areas of rhombuses and kites.
  - Find angle measures in regular polygons.
- Find areas of regular polygons.

## Finding Areas of Rhombuses and Kites

You can divide a rhombus or kite with diagonals  $d_1$  and  $d_2$  into two congruent triangles with base  $d_1$ , height  $\frac{1}{2}d_2$ , and area  $\frac{1}{2}d_1(\frac{1}{2}d_2) = \frac{1}{4}d_1d_2$ . So, the area of a rhombus or kite is  $2(\frac{1}{4}d_1d_2) = \frac{1}{2}d_1d_2$ .

# S Core Concept

#### Area of a Rhombus or Kite

The area of a rhombus or kite with diagonals  $d_1$  and  $d_2$  is  $\frac{1}{2}d_1d_2$ .

#### EXAMPLE 1

#### Finding the Area of a Rhombus or Kite

Find the area of each rhombus or kite.

- **1.** Find the area of a rhombus with diagonals  $d_1 = 4$  feet and  $d_2 = 5$  feet.
- **2.** Find the area of a kite with diagonals  $d_1 = 12$  inches and  $d_2 = 9$  inches.

## Finding Angle Measures in Regular Polygons

The diagram shows a regular polygon inscribed in a circle. The **center of a regular polygon** and the **radius of a regular polygon** are the center and the radius of its circumscribed circle.

The distance from the center to any side of a regular polygon is called the **apothem of a regular polygon**. The apothem is the height to the base of an isosceles triangle that has two radii as legs. The word "apothem" refers to a segment as well as a length. For a given regular polygon, think of *an* apothem as a segment and *the* apothem as a length.

 $\angle MPN$  is a central angle.

A **central angle of a regular polygon** is an angle formed by two radii drawn to consecutive vertices of the polygon. To find the measure of each central angle, divide 360° by the number of sides.

#### **EXAMPLE 2** Finding Angle Measures in a Regular Polygon

In the diagram, *ABCDE* is a regular pentagon inscribed in  $\bigcirc F$ . Find each angle measure.

**a.** *m∠AFB* 

**b.** *m∠AFG* 

**c.**  $m \angle GAF$ 

#### SOLUTION

- **a.**  $\angle AFB$  is a central angle, so  $m \angle AFB = \frac{360^{\circ}}{5} = 72^{\circ}$ .
- **b.**  $\overline{FG}$  is an apothem, which makes it an altitude of isosceles  $\triangle AFB$ .

So, 
$$\overline{FG}$$
 bisects  $\angle AFB$  and  $m \angle AFG = \frac{1}{2}m \angle AFB = 36^{\circ}$ .

**c.** By the Triangle Sum Theorem, the sum of the angle measures of right  $\triangle GAF$  is 180°.

$$m \angle GAF = 180^\circ - 90^\circ - 36^\circ$$
$$= 54^\circ$$

So,  $m \angle GAF = 54^{\circ}$ .

#### In the diagram, *WXYZ* is a square inscribed in $\bigcirc P$ .

- **3.** Identify the center, a radius, an apothem, and a central angle of the polygon.
- **4.** Find  $m \angle XPY$ ,  $m \angle XPQ$ , and  $m \angle PXQ$ .

# X P Z

## ANALYZING RELATIONSHIPS

 $\overline{FG}$  is an altitude of an isosceles triangle, so it is also a median and angle bisector of the isosceles triangle.

## **Finding Areas of Regular Polygons**

You can find the area of any regular *n*-gon by dividing it into congruent triangles.

A = Area of one triangle • Number of triangles

$=\left(\frac{1}{2}\cdot s\cdot a\right)\cdot n$	Base of triangle is <i>s</i> and height of triangle is <i>a</i> . Number of triangles is <i>n</i> .
$=\frac{1}{2} \bullet a \bullet (n \bullet s)$	Commutative and Associative Properties of Multiplication
$=\frac{1}{2}a \bullet P$	There are <i>n</i> congruent sides of length <i>s</i> , so perimeter <i>P</i> is $n \cdot s$ .

# 💪 Core Concept

#### Area of a Regular Polygon

The area of a regular n-gon with side length s is one-half the product of the apothem a and the perimeter P.

$$A = \frac{1}{2}aP$$
, or  $A = \frac{1}{2}a \cdot ns$ 

EXAMPLE 3

#### Finding the Area of a Regular Polygon

A regular nonagon is inscribed in a circle with a radius of 4 units. Find the area of the nonagon.

#### **SOLUTION**

The measure of central  $\angle JLK$  is  $\frac{360^{\circ}}{9}$ , or 40°. Apothem  $\overline{LM}$  bisects the central angle, so  $m \angle KLM$  is 20°. To find the lengths of the legs, use trigonometric ratios for right  $\triangle KLM$ .

The regular nonagon has side length  $s = 2(MK) = 2(4 \sin 20^\circ) = 8 \sin 20^\circ$ , and apothem  $a = LM = 4 \cos 20^\circ$ .

So, the area is  $A = \frac{1}{2}a \cdot ns = \frac{1}{2}(4 \cos 20^\circ) \cdot (9)(8 \sin 20^\circ) \approx 46.3$  square units.

#### READING DIAGRAMS

In this book, a point shown inside a regular polygon marks the center of the circle that can be circumscribed about the polygon.

#### Finding the Area of a Regular Polygon

You are decorating the top of a table by covering it with small ceramic tiles. The tabletop is a regular octagon with 15-inch sides and a radius of about 19.6 inches. What is the area you are covering?

#### **SOLUTION**

- **Step 1** Find the perimeter *P* of the tabletop. An octagon has 8 sides, so P = 8(15) = 120 inches.
- **Step 2** Find the apothem *a*. The apothem is height *RS* of  $\triangle PQR$ .

Because  $\triangle PQR$  is isosceles, altitude  $\overline{RS}$  bisects  $\overline{QP}$ .

So, 
$$QS = \frac{1}{2}(QP) = \frac{1}{2}(15) = 7.5$$
 inches.

To find *RS*, use the Pythagorean Theorem for  $\triangle RQS$ .

$$a = RS = \sqrt{19.6^2 - 7.5^2} = \sqrt{327.91} \approx 18.108$$

**Step 3** Find the area *A* of the tabletop.

$A = \frac{1}{2}aP$	Formula for area of a regular polygon
$=\frac{1}{2}(\sqrt{327.91})(120)$	Substitute.
≈ 1086.5	Simplify.

The area you are covering with tiles is about 1086.5 square inches.

**In Exercises 19–24, find the area of the regular polygon.** (See Examples 3 and 4.)

- **23.** an octagon with a radius of 11 units
- 24. a pentagon with an apothem of 5 units
- **25. ERROR ANALYSIS** Describe and correct the error in finding the area of the kite.

So, the area of the kite is 9.72 square units.

**26. ERROR ANALYSIS** Describe and correct the error in finding the area of the regular hexagon.

In Exercises 27–30, you throw a dart at the region shown. Your dart is equally likely to hit any point inside the region. Find the probability that your dart lands in the shaded region.

**31. MODELING WITH MATHEMATICS** Basaltic columns are geological formations that result from rapidly cooling lava. Giant's Causeway in Ireland contains many hexagonal basaltic columns. Suppose the top of one of the columns is in the shape of a regular hexagon with a radius of 8 inches. Find the area of the top of the column to the nearest square inch.

**32. MODELING WITH MATHEMATICS** A watch has a circular surface on a background that is a regular octagon. Find the area of the octagon. Then find the area of the silver border around the circular face.

# **CRITICAL THINKING** In Exercises 33–35, tell whether the statement is *true* or *false*. Explain your reasoning.

- **33.** The area of a regular *n*-gon of a fixed radius *r* increases as *n* increases.
- **34.** The apothem of a regular polygon is always less than the radius.
- **35.** The radius of a regular polygon is always less than the side length.
- **36. REASONING** Predict which figure has the greatest area and which has the least area. Explain your reasoning. Check by finding the area of each figure.

- **37.** USING EQUATIONS Find the area of a regular pentagon inscribed in a circle whose equation is given by  $(x 4)^2 + (y + 2)^2 = 25$ .
- **38. REASONING** What happens to the area of a kite if you double the length of one of the diagonals? if you double the length of both diagonals? Justify your answer.

#### MATHEMATICAL CONNECTIONS In Exercises 39 and 40, write and solve an equation to find the indicated lengths. Round decimal answers to the nearest tenth.

- **39.** The area of a kite is 324 square inches. One diagonal is twice as long as the other diagonal. Find the length of each diagonal.
- **40.** One diagonal of a rhombus is four times the length of the other diagonal. The area of the rhombus is 98 square feet. Find the length of each diagonal.
- **41. REASONING** The perimeter of a regular nonagon, or 9-gon, is 18 inches. Is this enough information to find the area? If so, find the area and explain your reasoning. If not, explain why not.

- 42. MAKING AN ARGUMENT Your friend claims that it is possible to find the area of any rhombus if you only know the perimeter of the rhombus. Is your friend correct? Explain your reasoning.
- **43. PROOF** Prove that the area of any quadrilateral with perpendicular diagonals is  $A = \frac{1}{2}d_1d_2$ , where  $d_1$  and  $d_2$ are the lengths of the diagonals.

44. HOW DO YOU SEE IT? Explain how to find the area of the regular hexagon by dividing the hexagon into equilateral triangles.

- 45. REWRITING A FORMULA Rewrite the formula for the area of a rhombus for the special case of a square with side length s. Show that this is the same as the formula for the area of a square,  $A = s^2$ .
- **46. REWRITING A FORMULA** Use the formula for the area of a regular polygon to show that the area of an equilateral triangle can be found by using the formula  $A = \frac{1}{4}s^2\sqrt{3}$ , where *s* is the side length.
- 47. CRITICAL THINKING The area of a regular pentagon is 72 square centimeters. Find the length of one side.
- **48.** CRITICAL THINKING The area of a dodecagon, or 12-gon, is 140 square inches. Find the apothem of the polygon.

## Maintaining Mathematical Proficiency Reviewing what you learned in previous grades and lessons

**49. USING STRUCTURE** In the figure, an equilateral triangle lies inside a square inside a regular pentagon inside a regular hexagon. Find the approximate area of the entire shaded region to the nearest whole number.

**50. THOUGHT PROVOKING** The area of a regular *n*-gon is given by  $A = \frac{1}{2}aP$ . As *n* approaches infinity, what does the *n*-gon approach? What does *P* approach? What does a approach? What can you conclude from your three answers? Explain your reasoning.

**51. COMPARING METHODS** Find the area of regular pentagon *ABCDE* by using the formula  $A = \frac{1}{2}aP$ , or  $A = \frac{1}{2}a \bullet ns$ . Then find the area by adding the areas of smaller polygons. Check that both methods yield the same area. Which method do you prefer? Explain your reasoning.

**52.** USING STRUCTURE Two regular polygons both have *n* sides. One of the polygons is inscribed in, and the other is circumscribed about, a circle of radius r. Find the area between the two polygons in terms of *n* and *r*.

## Core Vocabulary

polyhedron, *p.*face, *p.* 666 edge, *p.* 666 vertex, *p.*volume, *p.*Cavalieri's Principle, *p.*similar solids, *p.*

#### Previous

solid prism pyramid cylinder cone sphere base composite solid

# What You Will Learn

- Classify solids.
- Find volumes of prisms and cylinders.

# **Classifying Solids**

A three-dimensional figure, or solid, is bounded by flat or curved surfaces that enclose a single region of space. A **polyhedron** is a solid that is bounded by polygons, called **faces**. An **edge** of a polyhedron is a line segment formed by the intersection of two faces. A **vertex** of a polyhedron is a point where three or more edges meet. The plural of polyhedron is *polyhedra* or *polyhedrons*.

# Core Concept

#### Pentagonal prism

Triangular pyramid

To name a prism or a pyramid, use the shape of the *base*. The two bases of a prism are congruent polygons in parallel planes. For example, the bases of a pentagonal prism are pentagons. The base of a pyramid is a polygon. For example, the base of a triangular pyramid is a triangle.

#### EXAMPLE 1

#### **Classifying Solids**

Tell whether each solid is a polyhedron. If it is, name the polyhedron.

#### SOLUTION

- **a.** The solid is formed by polygons, so it is a polyhedron. The two bases are congruent rectangles, so it is a rectangular prism.
- **b.** The solid is formed by polygons, so it is a polyhedron. The base is a hexagon, so it is a hexagonal pyramid.
- c. The cone has a curved surface, so it is not a polyhedron.

# Monitoring Progress Help in English and Spanish at BigldeasMath.com

Tell whether the solid is a polyhedron. If it is, name the polyhedron.

## **Finding Volumes of Prisms and Cylinders**

The **volume** of a solid is the number of cubic units contained in its interior. Volume is measured in cubic units, such as cubic centimeters (cm<sup>3</sup>). Cavalieri's Principle, named after Bonaventura Cavalieri (1598–1647), states that if two solids have the same height and the same cross-sectional area at every level, then they have the same volume. The prisms below have equal heights h and equal cross-sectional areas B at every level. By Cavalieri's Principle, the prisms have the same volume.

Find the volume of each prism.

#### SOLUTION

**a.** The area of a base is  $B = \frac{1}{2}(3)(4) = 6 \text{ cm}^2$  and the height is h = 2 cm.

V = Bh = 6(2) = 12

The volume is 12 cubic centimeters.

**b.** The area of a base is  $B = \frac{1}{2}(3)(6 + 14) = 30 \text{ cm}^2$  and the height is h = 5 cm.

V = Bh = 30(5) = 150

The volume is 150 cubic centimeters.

Consider a cylinder with height *h* and base radius *r* and a rectangular prism with the same height that has a square base with sides of length  $r\sqrt{\pi}$ .

The cylinder and the prism have the same cross-sectional area,  $\pi r^2$ , at every level and the same height. By Cavalieri's Principle, the prism and the cylinder have the same volume. The volume of the prism is  $V = Bh = \pi r^2 h$ , so the volume of the cylinder is also  $V = Bh = \pi r^2 h$ .

# G Core Concept

#### Volume of a Cylinder

The volume V of a cylinder is

$$V = Bh = \pi r^2 h$$

where *B* is the area of a base, *h* is the height, and *r* is the radius of a base.

Find the volume of each cylinder.

#### **SOLUTION**

**a.** The dimensions of the cylinder are r = 9 ft and h = 6 ft.

 $V = \pi r^2 h = \pi(9)^2(6) = 486\pi \approx 1526.81$ 

The volume is  $486\pi$ , or about 1526.81 cubic feet.

**b.** The dimensions of the cylinder are r = 4 cm and h = 7 cm.

 $V = \pi r^2 h = \pi (4)^2 (7) = 112 \pi \approx 351.86$ 

The volume is  $112\pi$ , or about 351.86 cubic centimeters.

## Monitoring Progress

Help in English and Spanish at BigldeasMath.com

Find the volume of the solid.

#### **Similar Solids**

Two solids of the same type with equal ratios of corresponding linear measures, such as heights or radii, are called **similar solids**. The ratio of the corresponding linear measures of two similar solids is called the scale factor. If two similar solids have a scale factor of k, then the ratio of their volumes is equal to  $k^3$ .

EXAMPLE 4 Finding the Volume of a Similar Solid

Cylinder A and cylinder B are similar. Find the volume of cylinder B.

#### SOLUTION

The scale factor is  $k = \frac{\text{Radius of cylinder B}}{\text{Radius of cylinder A}}$ 

#### **COMMON ERROR**

Be sure to write the ratio of the volumes in the same order you wrote the ratio of the radii.

Use the scale factor to find the volume of cylinder B.

 $=\frac{6}{3}=2.$ 

Volume of cylinder B = $k^3$	The ratio of the volumes is $k^3$
Volume of cylinder A $-\kappa$	The facto of the volumes is k.
Volume of cylinder B = $2^3$	Substitute
$45\pi$ – 2	Substitute.

Solve for volume of cylinder B.

The volume of cylinder B is  $360\pi$  cubic centimeters.

# Monitoring Progress Help in English and Spanish at BigldeasMath.com

6. Prism C and prism D are similar. Find the volume of prism D.

#### EXAMPLE 5 Finding the Volume of a Composite Solid

Find the volume of the concrete block.

#### **SOLUTION**

To find the area of the base, subtract two times the area of the small rectangle from the large rectangle.

B = Area of large rectangle - 2 • Area of small rectangle = 1.31(0.66) - 2(0.33)(0.39)

= 0.6072

Using the formula for the volume of a prism, the volume is

 $V = Bh = 0.6072(0.66) \approx 0.40.$ 

The volume is about 0.40 cubic foot.

Help in English and Spanish at BigldeasMath.com

7. Find the volume of the composite solid.

7 ft

8 ft

**27.** Volume =  $3000 \text{ ft}^3$ 

**26.** Volume =  $72.66 \text{ in.}^3$ 

**28.** Volume =  $1696.5 \text{ m}^3$ 

In Exercises 29 and 30, the solids are similar. Find the volume of solid B. (See Example 4.)

**35. MODELING WITH MATHEMATICS** The Great Blue Hole is a cylindrical trench located off the coast of Belize. It is approximately 1000 feet wide and 400 feet deep. About how many gallons of water does the Great Blue Hole contain? (1 ft<sup>3</sup>  $\approx$  7.48 gallons)

- **36. COMPARING METHODS** The *Volume Addition Postulate* states that the volume of a solid is the sum of the volumes of all its nonoverlapping parts. Use this postulate to find the volume of the block of concrete in Example 5 by subtracting the volume of each hole from the volume of the large rectangular prism. Which method do you prefer? Explain your reasoning.
- **37. WRITING** Both of the figures shown are made up of the same number of congruent rectangles. Explain how Cavalieri's Principle can be adapted to compare the areas of these figures.

**38. HOW DO YOU SEE IT?** Each stack of memo papers contains 500 equally-sized sheets of paper. Compare their volumes. Explain your reasoning.

- **39. OPEN-ENDED** Sketch two rectangular prisms that have volumes of 100 cubic inches but different surface areas. Include dimensions in your sketches.
- **40. MAKING AN ARGUMENT** Your friend says that the polyhedron shown is a triangular prism. Your cousin says that it is a triangular pyramid. Who is correct? Explain your reasoning.

- **41. MAKING AN ARGUMENT** A prism and a cylinder have the same height and different cross-sectional areas. Your friend claims that the two solids have the same volume by Cavalieri's Principle. Is your friend correct? Explain your reasoning.
- **42. THOUGHT PROVOKING** Cavalieri's Principle states that the two solids shown below have the same volume. Do they also have the same surface area? Explain your reasoning.

**43. PROBLEM SOLVING** A barn is in the shape of a pentagonal prism with the dimensions shown. The volume of the barn is 9072 cubic feet. Find the dimensions of each half of the roof.

**44. PROBLEM SOLVING** A wooden box is in the shape of a regular pentagonal prism. The sides, top, and bottom of the box are 1 centimeter thick. Approximate the volume of wood used to construct the box. Round your answer to the nearest tenth.

# **11.5** Volumes of Pyramids

# **Essential Question** How can you find the volume of a pyramid?

#### EXPLORATION 1 Finding the Volume of a Pyramid

Work with a partner. The pyramid and the prism have the same height and the same square base.

When the pyramid is filled with sand and poured into the prism, it takes three pyramids to fill the prism.

LOOKING FOR STRUCTURE

> To be proficient in math, you need to look closely to discern a pattern or structure.

Use this information to write a formula for the volume V of a pyramid.

**EXPLORATION 2** 

#### Finding the Volume of a Pyramid

**Work with a partner.** Use the formula you wrote in Exploration 1 to find the volume of the hexagonal pyramid.

# **Communicate Your Answer**

- **3.** How can you find the volume of a pyramid?
- **4.** In Section 11.6, you will study volumes of cones. How do you think you could use a method similar to the one presented in Exploration 1 to write a formula for the volume of a cone? Explain your reasoning.

# **11.5** Lesson

## Core Vocabulary

**Previous** pyramid composite solid

# What You Will Learn

- Find volumes of pyramids.
- Use volumes of pyramids.

## **Finding Volumes of Pyramids**

Consider a triangular prism with parallel, congruent bases  $\triangle JKL$  and  $\triangle MNP$ . You can divide this triangular prism into three triangular pyramids.

You can combine triangular pyramids 1 and 2 to form a pyramid with a base that is a parallelogram, as shown at the left. Name this pyramid Q. Similarly, you can combine triangular pyramids 1 and 3 to form pyramid R with a base that is a parallelogram.

In pyramid Q, diagonal *KM* divides  $\Box JKNM$  into two congruent triangles, so the bases of triangular pyramids 1 and 2 are congruent. Similarly, you can divide any cross section parallel to  $\Box JKNM$  into two congruent triangles that are the cross sections of triangular pyramids 1 and 2.

By Cavalieri's Principle, triangular pyramids 1 and 2 have the same volume. Similarly, using pyramid *R*, you can show that triangular pyramids 1 and 3 have the same volume. By the Transitive Property of Equality, triangular pyramids 2 and 3 have the same volume.

The volume of each pyramid must be one-third the volume of the prism, or  $V = \frac{1}{3}Bh$ . You can generalize this formula to say that the volume of any pyramid with any base is equal to  $\frac{1}{3}$  the volume of a prism with the same base and height because you can divide any polygon into triangles and any pyramid into triangular pyramids.

# 🔄 Core Concept

#### Volume of a Pyramid

The volume V of a pyramid is

$$V = \frac{1}{2}Bh$$

where B is the area of the base and h is the height.

## EXAMPLE 1 Finding the Volume of a Pyramid

Find the volume of the pyramid.

#### SOLUTION

$$V = \frac{1}{3}Bh$$
$$= \frac{1}{3}\left(\frac{1}{2} \cdot 4 \cdot 6\right)(9)$$
$$= 36$$

Formula for volume of a pyramid Substitute. Simplify.

Pyramid Q

M

# Monitoring Progress

Find the volume of the pyramid.

## **Using Volumes of Pyramids**

#### Using the Volume of a Pyramid

Originally, Khafre's Pyramid had a height of about 144 meters and a volume of about 2,218,800 cubic meters. Find the side length of the square base.

#### **SOLUTION**

$V = \frac{1}{3}Bh$	Formula for volume of a pyramid
$2,218,800 \approx \frac{1}{3}x^2(144)$	Substitute.
$6,656,400 \approx 144x^2$	Multiply each side by 3.
$46,225 \approx x^2$	Divide each side by 144.
$215 \approx x$	Find the positive square root.

• Originally, the side length of the square base was about 215 meters.

EXAMPLE 3

#### Using the Volume of a Pyramid

Find the height of the triangular pyramid.

#### **SOLUTION**

The area of the base is  $B = \frac{1}{2}(3)(4) = 6$  ft<sup>2</sup> and the volume is V = 14 ft<sup>3</sup>.

$V = \frac{1}{3}Bh$	Formula for volume of a pyramid
$14 = \frac{1}{3}(6)h$	Substitute.
7 = h	Solve for <i>h</i> .
The height is 7 feet.	

## Monitoring Progress

# **11.6** Surface Areas and Volumes of Cones

# Essential Question How can you find the surface area and the

volume of a cone?

#### EXPLORATION 1 Finding the Surface Area of a Cone

**Work with a partner.** Construct a circle with a radius of 3 inches. Mark the circumference of the circle into six equal parts, and label the length of each part. Then cut out one sector of the circle and make a cone.

- **a.** Explain why the base of the cone is a circle. What are the circumference and radius of the base?
- **b.** What is the area of the original circle? What is the area with one sector missing?
- **c.** Describe the surface area of the cone, including the base. Use your description to find the surface area.

#### **EXPLORATION 2**

#### Finding the Volume of a Cone

Work with a partner. The cone and the cylinder have the same height and the same circular base.

When the cone is filled with sand and poured into the cylinder, it takes three cones to fill the cylinder.

#### CONSTRUCTING VIABLE ARGUMENTS

To be proficient in math, you need to understand and use stated assumptions, definitions, and previously established results in constructing arguments.

Use this information to write a formula for the volume V of a cone.

# **Communicate Your Answer**

- 3. How can you find the surface area and the volume of a cone?
- **4.** In Exploration 1, cut another sector from the circle and make a cone. Find the radius of the base and the surface area of the cone. Repeat this three times, recording your results in a table. Describe the pattern.

# 11.6 Lesson

## Core Vocabulary

lateral surface of a cone, p. 680

Previous

cone net composite solid

# What You Will Learn

- Find surface areas of right cones.
- Find volumes of cones.
- Use volumes of cones.

# **Finding Surface Areas of Right Cones**

Recall that a *circular cone*, or *cone*, has a circular base and a *vertex* that is not in the same plane as the base. The altitude, or height, is the perpendicular distance between the vertex and the base. In a right cone, the height meets the base at its center and the *slant height* is the distance between the vertex and a point on the base edge.

The **lateral surface of a cone** consists of all segments that connect the vertex with points on the base edge. When you cut along the slant height and lay the right cone flat, you get the net shown at the left. In the net, the circular base has an area of  $\pi r^2$ and the lateral surface is a sector of a circle. You can find the area of this sector by using a proportion, as shown below.

$\frac{\text{Area of sector}}{\text{Arc length}} = \frac{\text{Arc length}}{\text{Arc length}}$	Set up proportion
Area of circle Circumference of circle	bet up proportioni
$\frac{\text{Area of sector}}{\pi\ell^2} = \frac{2\pi r}{2\pi\ell}$	Substitute.
Area of sector = $\pi \ell^2 \cdot \frac{2\pi r}{2\pi \ell}$	Multiply each side by $\pi \ell^2$ .
Area of sector = $\pi r \ell$	Simplify.

The surface area of a right cone is the sum of the base area and the lateral area,  $\pi r \ell$ .

# S Core Concept

#### **Surface Area of a Right Cone**

The surface area S of a right cone is

 $S = \pi r^2 + \pi r \ell$ 

where r is the radius of the base and  $\ell$  is the slant height.

#### EXAMPLE **Finding Surface Areas of Right Cones**

Find the surface area of the right cone.

#### **SOLUTION**

 $S = \pi r^2 + \pi r \ell = \pi \cdot 4^2 + \pi (4)(6) = 40\pi \approx 125.66$ 

The surface area is  $40\pi$ , or about 125.66 square inches.

Monitoring Progress Help in English and Spanish at BigldeasMath.com

1. Find the surface area of the right cone.

## **Finding Volumes of Cones**

Consider a cone with a regular polygon inscribed in the base. The pyramid with the same vertex as the cone has volume  $V = \frac{1}{3}Bh$ . As you increase the number of sides of the polygon, it approaches the base of the cone and the pyramid approaches the cone. The volume approaches  $\frac{1}{3}\pi r^2h$  as the base area *B* approaches  $\pi r^2$ .

## **Surface Areas and Volumes** 11.7 of Spheres

## **Essential Question** How can you find the surface area and the

volume of a sphere?

### **EXPLORATION 1**

Finding the Surface Area of a Sphere

Work with a partner. Remove the covering from a baseball or softball.

### **USING TOOLS** STRATEGICALLY

To be proficient in math, you need to identify relevant external mathematical resources, such as content located on a website.

You will end up with two "figure 8" pieces of material, as shown above. From the amount of material it takes to cover the ball, what would you estimate the surface area S of the ball to be? Express your answer in terms of the radius r of the ball.

Surface area of a sphere

Use the Internet or some other resource to confirm that the formula you wrote for the surface area of a sphere is correct.

#### **EXPLORATION 2**

S =

V =

#### Finding the Volume of a Sphere

Volume of cylinder

Work with a partner. A cylinder is circumscribed about a sphere, as shown. Write a formula for the volume V of the cylinder in terms of the radius r.

When half of the sphere (a hemisphere) is filled with sand and poured into the cylinder, it takes three hemispheres to fill the cylinder. Use this information to write a formula for the volume Vof a sphere in terms of the radius r.

V =

Volume of a sphere

# **Communicate Your Answer**

- **3.** How can you find the surface area and the volume of a sphere?
- 4. Use the results of Explorations 1 and 2 to find the surface area and the volume of a sphere with a radius of (a) 3 inches and (b) 2 centimeters.

# **11.7** Lesson

## Core Vocabulary

chord of a sphere, *p.* 686 great circle, *p.* 686

#### Previous

sphere center of a sphere radius of a sphere diameter of a sphere hemisphere

# What You Will Learn

- Find surface areas of spheres.
- Find volumes of spheres.

## **Finding Surface Areas of Spheres**

A *sphere* is the set of all points in space equidistant from a given point. This point is called the *center* of the sphere. A *radius* of a sphere is a segment from the center to a point on the sphere. A **chord of a sphere** is a segment whose endpoints are on the sphere. A *diameter* of a sphere is a chord that contains the center.

As with circles, the terms radius and diameter also represent distances, and the diameter is twice the radius.

If a plane intersects a sphere, then the intersection is either a single point or a circle. If the plane contains the center of the sphere, then the intersection is a **great circle** of the sphere. The circumference of a great circle is the circumference of the sphere. Every great circle of a sphere separates the sphere into two congruent halves called *hemispheres*.

# G Core Concept

#### Surface Area of a Sphere

The surface area S of a sphere is

 $S = 4\pi r^2$ 

where r is the radius of the sphere.

To understand the formula for the surface area of a sphere, think of a baseball. The surface area of a baseball is sewn from two congruent shapes, each of which resembles two joined circles.

So, the entire covering of the baseball consists of four circles, each with radius *r*. The area *A* of a circle with radius *r* is  $A = \pi r^2$ . So, the area of the covering can be approximated by  $4\pi r^2$ . This is the formula for the surface area of a sphere.

#### **Finding the Surface Areas of Spheres**

Find the surface area of each sphere.

# **a.** $S = 4\pi r^2$ Formula for surface area of a sphere $= 4\pi(8)^2$ Substitute 8 for r. $= 256\pi$ Simplify. $\approx 804.25$ Use a calculator.

The surface area is  $256\pi$ , or about 804.25 square inches.

**b.** The circumference of the sphere is  $12\pi$ , so the radius of the sphere is  $\frac{12\pi}{2\pi} = 6$  feet.

$S = 4\pi r^2$	Formula for surface area of a sphere
$=4\pi(6)^2$	Substitute 6 for <i>r</i> .
$= 144\pi$	Simplify.
≈ 452.39	Use a calculator.

The surface area is  $144\pi$ , or about 452.39 square feet.

#### EXAMPLE 2 Finding the Diameter of a Sphere

Find the diameter of the sphere.

#### SOLUTION

$S = 4\pi r^2$	Formula for surface area of a sphere
$20.25\pi = 4\pi r^2$	Substitute 20.25 $\pi$ for S.
$5.0625 = r^2$	Divide each side by $4\pi$ .
2.25 = r	Find the positive square root.

The diameter is  $2r = 2 \cdot 2.25 = 4.5$  centimeters.

#### Find the surface area of the sphere.

#### COMMON ERROR

Be sure to multiply the value of *r* by 2 to find the diameter.

## **Finding Volumes of Spheres**

The figure shows a hemisphere and a cylinder with a cone removed. A plane parallel to their bases intersects the solids *z* units above their bases.

Using the AA Similarity Theorem, you can show that the radius of the cross section of the cone at height z is z. The area of the cross section formed by the plane is  $\pi(r^2 - z^2)$  for both solids. Because the solids have the same height and the same cross-sectional area at every level, they have the same volume by Cavalieri's Principle.

$$V_{\text{hemisphere}} = V_{\text{cylinder}} - V_{\text{cone}}$$
$$= \pi r^2(r) - \frac{1}{3}\pi r^2(r)$$
$$= \frac{2}{3}\pi r^3$$

So, the volume of a sphere of radius r is

$$2 \bullet V_{\text{hemisphere}} = 2 \bullet \frac{2}{3}\pi r^3 = \frac{4}{3}\pi r^3.$$

# 🔄 Core Concept

#### Volume of a Sphere

The volume V of a sphere is

$$V = \frac{4}{3}\pi r^3$$

where *r* is the radius of the sphere.

#### Finding the Volume of a Sphere

Find the volume of the soccer ball.

#### SOLUTION

$V = \frac{4}{3}\pi r^3$	Formula for volume of a sphere
$=\frac{4}{3}\pi(4.5)^3$	Substitute 4.5 for <i>r</i> .
$= 121.5\pi$	Simplify.
≈ 381.70	Use a calculator.

The volume of the soccer ball is  $121.5\pi$ , or about 381.70 cubic inches.

#### Finding the Volume of a Sphere

The surface area of a sphere is  $324\pi$  square centimeters. Find the volume of the sphere.

#### SOLUTION

**Step 1** Use the surface area to find the radius.

$S = 4\pi r^2$	Formula for surface area of a sphere
$324\pi = 4\pi r^2$	Substitute 324 $\pi$ for S.
$81 = r^2$	Divide each side by $4\pi$ .
9 = r	Find the positive square root.

The radius is 9 centimeters.

**Step 2** Use the radius to find the volume.

$V = \frac{4}{3}\pi r^3$	Formula for volume of a sphere
$=\frac{4}{3}\pi(9)^{3}$	Substitute 9 for <i>r</i> .
$=972\pi$	Simplify.
≈ 3053.63	Use a calculator.

The volume is  $972\pi$ , or about 3053.63 cubic centimeters.

#### EXAMPLE 5 Finding the Volume of a Composite Solid

2 in.

Find the volume of the composite solid.

#### **SOLUTION**

The volume is  $\frac{8}{3}\pi$ , or about 8.38 cubic inches.

# In Exercises 7–10, find the indicated measure.

(See Example 2.)

- 7. Find the radius of a sphere with a surface area of  $4\pi$  square feet.
- 8. Find the radius of a sphere with a surface area of  $1024\pi$  square inches.
- **9.** Find the diameter of a sphere with a surface area of  $900\pi$  square meters.
- **10.** Find the diameter of a sphere with a surface area of  $196\pi$  square centimeters.

#### In Exercises 11 and 12, find the surface area of the hemisphere.

In Exercises 13–18, find the volume of the sphere. (See Example 3.)

In Exercises 19 and 20, find the volume of the sphere with the given surface area. (See Example 4.)

- **19.** Surface area =  $16\pi$  ft<sup>2</sup>
- **20.** Surface area =  $484 \pi \text{ cm}^2$
- 21. ERROR ANALYSIS Describe and correct the error in finding the volume of the sphere.

**22. ERROR ANALYSIS** Describe and correct the error in finding the volume of the sphere.

# In Exercises 23–26, find the volume of the composite solid. (*See Example 5.*)

# In Exercises 27–32, find the surface area and volume of the ball.

**27.** bowling ball

#### **28.** basketball

*d* = 8.5 in.

29. softball

**31.** volleyball

**30.** golf ball

C = 29.5 in.

**32.** baseball

- **33. MAKING AN ARGUMENT** You friend claims that if the radius of a sphere is doubled, then the surface area of the sphere will also be doubled. Is your friend correct? Explain your reasoning.
- **34. MODELING WITH MATHEMATICS** The circumference of Earth is about 24,900 miles. Find the surface area of the Western Hemisphere of Earth.
- **35. MODELING WITH MATHEMATICS** A silo has the dimensions shown. The top of the silo is a hemispherical shape. Find the volume of the silo.

- **36. MODELING WITH MATHEMATICS** Three tennis balls are stored in a cylindrical container with a height of 8 inches and a radius of 1.43 inches. The circumference of a tennis ball is 8 inches.
  - **a.** Find the volume of a tennis ball.
  - **b.** Find the amount of space within the cylinder not taken up by the tennis balls.

**37. ANALYZING RELATIONSHIPS** Use the table shown for a sphere.

Radius	Surface area	Volume
3 in.	$36\pi\mathrm{in.^2}$	$36\pi$ in. <sup>3</sup>
6 in.		
9 in.		
12 in.		

- **a.** Copy and complete the table. Leave your answers in terms of  $\pi$ .
- **b.** What happens to the surface area of the sphere when the radius is doubled? tripled? quadrupled?
- **c.** What happens to the volume of the sphere when the radius is doubled? tripled? quadrupled?
- **38.** MATHEMATICAL CONNECTIONS A sphere has a diameter of 4(x + 3) centimeters and a surface area of 784 $\pi$  square centimeters. Find the value of *x*.

- **39. MODELING WITH MATHEMATICS** The radius of Earth is about 3960 miles. The radius of the moon is about 1080 miles.
  - **a.** Find the surface area of Earth and the moon.
  - **b.** Compare the surface areas of Earth and the moon.
  - **c.** About 70% of the surface of Earth is water. How many square miles of water are on Earth's surface?
- **40. MODELING WITH MATHEMATICS** The Torrid Zone on Earth is the area between the Tropic of Cancer and the Tropic of Capricorn. The distance between these two tropics is about 3250 miles. You can estimate the distance as the height of a cylindrical belt around Earth at the equator.

- **a.** Estimate the surface area of the Torrid Zone. (The radius of Earth is about 3960 miles.)
- **b.** A meteorite is equally likely to hit anywhere on Earth. Estimate the probability that a meteorite will land in the Torrid Zone.
- **41. ABSTRACT REASONING** A sphere is inscribed in a cube with a volume of 64 cubic inches. What is the surface area of the sphere? Explain your reasoning.
- **42.** HOW DO YOU SEE IT? The formula for the volume of a hemisphere and a cone are shown. If each solid has the same radius and r = h, which solid will have a greater volume? Explain your reasoning.

**43. CRITICAL THINKING** Let *V* be the volume of a sphere, *S* be the surface area of the sphere, and *r* be the radius of the sphere. Write an equation for *V* in terms of *r* 

and S. (*Hint*: Start with the ratio  $\frac{V}{S}$ .)

**44. THOUGHT PROVOKING** A *spherical lune* is the region between two great circles of a sphere. Find the formula for the area of a lune.

- **45. CRITICAL THINKING** The volume of a right cylinder is the same as the volume of a sphere. The radius of the sphere is 1 inch. Give three possibilities for the dimensions of the cylinder.
- **46. PROBLEM SOLVING** A *spherical cap* is a portion of a sphere cut off by a plane. The formula for the volume of a spherical cap is  $V = \frac{\pi h}{6} (3a^2 + h^2)$ , where *a* is the radius of the base of the cap and *h* is the height of the cap. Use the diagram and given information to find the volume of each spherical cap.

**a.** 
$$r = 5$$
 ft,  $a = 4$  ft  
**b.**  $r = 34$  cm,  $a = 30$  cm  
**c.**  $r = 13$  m,  $h = 8$  m  
**d.**  $r = 75$  in.,  $h = 54$  in.

**47. CRITICAL THINKING** A sphere with a radius of 2 inches is inscribed in a right cone with a height of 6 inches. Find the surface area and the volume of the cone.

## Maintaining Mathematical Proficiency Reviewing what you learned in previous grades and lessons

Events $A$ and $B$ are disjoint. Find $P(A \text{ or } B)$ .		(Section 5.4)	
48.	P(A) = 0.4, P(B) = 0.2	49.	P(A) = 0.75, P(B) = 0.05
50.	$P(A) = \frac{1}{8}, P(B) = \frac{3}{4}$	51.	$P(A) = \frac{2}{5}, P(B) = \frac{3}{10}$

# 11.4–11.7 What Did You Learn?

# **Core Vocabulary**

polyhedron, *p. 666* face, *p. 666* edge, *p. 666* vertex, *p. 666*  volume, *p.*Cavalieri's Principle, *p.*similar solids, *p.*lateral surface of a cone, *p.* chord of a sphere, *p. 686* great circle, *p. 686* 

# **Core Concepts**

#### Section 11.4

Types of Solids, *p.* 666 Cavalieri's Principle, *p.* 667 Volume of a Prism, *p.* 667

Section 11.5 Volume of a Pyramid, *p.* 674

Section 11.6 Surface Area of a Right Cone, *p. 680* 

Section 11.7 Surface Area of a Sphere, *p. 686*  Volume of a Cylinder, *p. 668* Similar Solids, *p. 669* 

Volume of a Cone, p. 681

Volume of a Sphere, p. 688

# **Mathematical Practices**

- **1.** In Exercise 15 on page 677, explain why the volume changed by a factor of  $\frac{1}{64}$ .
- 2. In Exercise 38 on page 691, explain the steps you used to find the value of *x*.

# **Performance Task:**

# **Tabletop Tiling**

A Penrose tiling has a variety of properties that make it attractive. How do the concepts of area and circumference contribute to the visual appeal of a tabletop tiled in this type of pattern?

To explore the answer to this question and more, check out the Performance Task and Real-Life STEM video at *BigldeasMath.com*.

# **Chapter Review**

Areas of Polygons (pp. 655–662)

**25.** The volume of a square pyramid is 1024 cubic inches. The base has a side length of 16 inches. Find the height of the pyramid.

#### Surface Areas and Volumes of Cones (pp. 679–684)

11.6

Find the (a) surface area and (b) volume of the cone. a.  $S = \pi r^2 + \pi r \ell$ Formula for surface area of a cone 12 cm 13 cm  $= \pi \cdot 5^2 + \pi(5)(13)$ Substitute.  $=90\pi$ Simplify. cm  $\approx 282.74$ Use a calculator. The surface area is  $90\pi$ , or about 282.74 square centimeters. **b.**  $V = \frac{1}{3}\pi r^2 h$ Formula for volume of a cone  $=\frac{1}{3}\pi \cdot 5^2 \cdot 12$ Substitute.  $= 100 \pi$ Simplify. ≈ 314.16 Use a calculator. The volume is  $100\pi$ , or about 314.16 cubic centimeters.

#### **11.7** Surface Areas and Volumes of Spheres (pp. 685–692)

**34.** A solid is composed of a cube with a side length of 6 meters and a hemisphere with a diameter of 6 meters. Find the volume of the composite solid.

# **Chapter Test**

Tell whether the solid is a polyhedron. If it is, name the polyhedron.

- **11.** Find the surface area of a right cone with a diameter of 10 feet and a height of 12 feet.
- **12.** You have a funnel with the dimensions shown.
  - **a.** Find the approximate volume of the funnel.
  - **b.** You use the funnel to put oil in a car. Oil flows out of the funnel at a rate of 45 milliliters per second. How long will it take to empty the funnel when it is full of oil?  $(1 \text{ mL} = 1 \text{ cm}^3)$
  - **c.** How long would it take to empty a funnel with a radius of 10 centimeters and a height of 6 centimeters if oil flows out of the funnel at a rate of 45 milliliters per second?
  - **d.** Explain why you can claim that the time calculated in part (c) is greater than the time calculated in part (b) without doing any calculations.
- **13.** A water bottle in the shape of a cylinder has a volume of 500 cubic centimeters. The diameter of a base is 7.5 centimeters. What is the height of the bottle? Justify your answer.
- **14.** Find the area of a dodecagon (12 sides) with a side length of 9 inches.
- **15.** In general, a cardboard fan with a greater area does a better job of moving air and cooling you. The fan shown is a sector of a cardboard circle. Another fan has a radius of 6 centimeters and an intercepted arc of 150°. Which fan does a better job of cooling you?

1. The directed line segment *RS* is shown. Point *Q* is located along  $\overline{RS}$  so that the ratio of *RQ* to *QS* is 2 to 3. What are the coordinates of point *Q*?

A	<i>Q</i> (1.2, 3)	B	Q(4, 2)
$\bigcirc$	<i>Q</i> (2, 3)	D	Q(-6,7)

**2.** In the diagram,  $\overrightarrow{RS}$  is tangent to  $\bigcirc P$  at Q and  $\overrightarrow{PQ}$  is a radius of  $\bigcirc P$ . What must be true about  $\overrightarrow{RS}$  and  $\overrightarrow{PQ}$ ? Select all that apply.

- **3.** A crayon can be approximated by a composite solid made from a cylinder and a cone. A crayon box is a rectangular prism. The dimensions of a crayon and a crayon box containing 24 crayons are shown.
  - **a.** Find the volume of a crayon.
  - **b.** Find the amount of space within the crayon box not taken up by the crayons.

4. The graphs of f(x) = |x| and g(x) = |x + k| are shown. Find the value of k.

- **5.** The top of the Washington Monument in Washington, D.C., is a square pyramid, called a *pyramidion*. What is the volume of the pyramidion?
  - (A) 22,019.63 ft<sup>3</sup>
  - **(B)** 172,006.91 ft<sup>3</sup>
  - **(C)** 66,058.88 ft<sup>3</sup>
  - **(D)** 207,530.08 ft<sup>3</sup>

- 6. Prove or disprove that the point  $(1, \sqrt{3})$  lies on the circle centered at the origin and containing the point (0, 2).
- 7. Enter the missing reasons in the proof of the Base Angles Theorem.

Given  $\overline{AB} \cong \overline{AC}$ Prove  $\angle B \cong \angle C$ 

STATEMENTS		REASONS	
1.	Draw $\overline{AD}$ , the angle bisector of $\angle CAB$ .	1.	Construction of angle bisector
2.	$\angle CAD \cong \angle BAD$	2.	
3.	$\overline{AB} \cong \overline{AC}$	3.	
4.	$\overline{DA} \cong \overline{DA}$	4.	
5.	$\triangle ADB \cong \triangle ADC$	5.	
6.	$\angle B \cong \angle C$	6.	

**8.** The diagram shows a square pyramid and a cone. Both solids have the same height, *h*, and the base of the cone has radius *r*. According to Cavalieri's Principle, the solids will have the same volume if the square base has sides of length \_\_\_\_\_.

9. A triangle has vertices X(-2, 2), Y(1, 4), and Z(2, -2). Your friend claims that a translation of (x, y) → (x + 2, y - 3) and a dilation by a scale factor of 3 will produce a similarity transformation. Do you support your friend's claim? Explain your reasoning.
