

**Key Concept and Vocabulary**

Quadrilateral	Diagram
A <i>trapezoid</i> has exactly 1 pair of parallel sides.	
A <i>parallelogram</i> has 2 pairs of parallel sides.	
A <i>rectangle</i> is a parallelogram with 4 right angles.	
A <i>rhombus</i> is a parallelogram with 4 congruent sides.	
A <i>square</i> is a parallelogram with 4 right angles and 4 congruent sides.	

**Visual Model**

**Skill Examples**

1. The quadrilateral has 4 right angles. Opposite sides have the same length, but all four sides are not the same length. So, the quadrilateral is a rectangle.

2. The quadrilateral has 0 right angles, 2 pairs of parallel sides, and four sides of the same length. So, the quadrilateral is a rhombus.

**PRACTICE MAKES PURR-FECT®**

Check your answers at [BigIdeasMath.com](http://BigIdeasMath.com).

Classify the quadrilateral in as many ways as possible.
